Analysis Of Neurophysiological Brain Functioning:

Analysis of Neurophysiological Brain Functioning Christian Uhl, 2012-12-06 The analysis of neurophysiological brain function is a highly interdisciplinary field of research In addition to the traditional areas of psychology and neurobiology various other scientific disciplines such as physics mathematics computer science and engineering are involved The book reviews a wide spectrum of model based analyses of neurophysiological brain function In the first part physical and physiological models and synergetic concepts are presented The second part focuses on analysis methods and their applications to EEG MEG data sets It reviews methods of source localization the investigation of synchronization processes and spatio temporal modeling based on dynamical systems theory The book includes contributions by well known scientists such as Hermann Haken Scott Kelso and Paul Nunez among others It is written for students and scientists from all the above mentioned fields

Principles of Brain Functioning Hermann Haken, 2013-03-12 It is increasingly being recognized that the experimental and theoretical study of the complex system brain requires the cooperation of many disciplines in cluding biology medicine physics chemistry mathematics computer science linguistics and others In this way brain research has become a truly interdis ciplinary endeavor Indeed the most important progress is quite often made when different disciplines cooperate Thus it becomes necessary for scientists to look across the fence surrounding their disciplines The present book is written precisely in this spirit It addresses graduate students professors and scientists in a variety of fields such as biology medicine and physics Be yond its mathematical representation the book gives ample space to verbal and pictorial descriptions of the main and as I believe fundamental new insights so that it will be of interest to a general readership too I use this opportunity to thank my former students some of whom are my present co workers for their cooperation over many years Among them I wish to mention in particular M Bestehorn L Borland H Bunz A Daf fertshofer T Ditzinger E Fischer A Fuchs R Haas R Honlinger V Jirsa M Neufeld M Ossig D Reimann M Schanz G Schoner P Tass C Uhl My particular thanks go to R Friedrich and A Wunderlin for their constant help in many respects Stimulating discussions with a number of colleagues from a variety of fields are also highly appreciated

17th International Conference on Biomagnetism Advances in Biomagnetism - Biomag 2010 - March 28 - April 1, 2010 Selma Supek, Ana Sušac, 2010-04-07 40th anniversary of medical uses of SQUID th It is my great pleasure and honor to invite you to the 17 International Conference on Biomagnetism Biomag2010 held in Dubrovnik Croatia from Sunday March 28 through Thursday April 1 2010 The interdisciplinary field of biomagnetism includes dynamic and evolving SQUID based technologies offering advanced real time methods for noninvasive assessments of magnetic signals from the brain heart and other organs as well as a range of modeling mathematical and computational methods for functional source localization approaches Excellent spatial resolution and unique millisecond temporal resolution of biomagnetic techniques allow insights into cortical neurodynamics and neurobiological basis of the human brain as well as assessment of heart and other organs functions in health and disease Biomag2010 will be a great

opportunity for an exchange of ideas and presentation of the latest developments in instrumentation modeling approaches basic and clinical biomedical studies We are particularly proud to announce the celebration of the 40th anniversary of the first SQUID based MCG measurements published on April 1 1970 Since then medical uses of SQUID were dynamic and growing including the most recent developments in combination with a low field MRI toward a direct neuronal imaging Dubrovnik the host city of the Biomag2010 a jewel on the Adriatic will be a superb and stimulating setting for both scientific and social aspects of this meeting I am looking forward to hosting you in Dubrovnik Croatia in spring of 2010

EEG/MEG Source Reconstruction Thomas R. Knösche, Jens Haueisen, 2022-10-01 This textbook provides a comprehensive and didactic introduction from the basics to the current state of the art in the field of EEG MEG source reconstruction Reconstructing the generators or sources of electroencephalographic and magnetoencephalographic EEG MEG signals is an important problem in basic neuroscience as well as clinical research and practice Over the past few decades an entire theory together with a whole collection of algorithms and techniques has developed In this textbook the authors provide a unified perspective on a broad range of EEG MEG source reconstruction methods with particular emphasis on their respective assumptions about sources data head tissues and sensor properties An introductory chapter highlights the concept of brain imaging and the particular importance of the neuroelectromagnetic inverse problem This is followed by an in depth discussion of neural information processing and brain signal generation and an introduction to the practice of data acquisition Next the relevant mathematical models for the sources of EEG and MEG are discussed in detail followed by the neuroelectromagnetic forward problem that is the prediction of EEG or MEG signals from those source models using biophysical descriptions of the head tissues and the sensors The main part of this textbook is dedicated to the source reconstruction methods The authors present a theoretical framework of the neuroelectromagnetic inverse problem centered on Bayes theorem which then serves as the basis for a detailed description of a large variety of techniques including dipole fit methods distributed source reconstruction spatial filters and dynamic source reconstruction methods The final two chapters address the important topic of assessment including verification and validation of source reconstruction methods and their actual application to real world scientific and clinical questions This book is intended as basic reading for anybody who is engaged with EEG MEG source reconstruction be it as a method developer or as a user including advanced undergraduate students PhD students and postdocs in neuroscience biomedical engineering and related fields
