Dan Petersen captures this new way of thinking in his completely updated and revised classic reference, *Analyzing Safety System Effectiveness*. Establishing a three-part paradigm, he uses a step-by-step approach that safety professionals can use to develop flexible new plans for analyzing the physical, managerial, and behavioral aspects of their existing safety programs. *Analyzing Safety Performance* describes the various ways to effectively analyze performance. *The Areas to Analyze* looks at specific ways of evaluating management and staff skills and behavior. *The Change Process* examines the processes of interpreting results, devising plans, and implementing change.

Wright,2003 The primary objective of this study was to evaluate the effects of a program of auditing on safety performance when administered in a heavy industrial manufacturing environment Safety auditing was used as a practical hands on training and awareness tool for hazard identification risk reduction and behavior modification Safety performance was analyzed from two perspectives the number of injury cases and standardized rates Performance was analyzed using both the t test and Poisson methodologies Due to the rarity of injury events the t test was an ineffective tool in determining whether the effects of the audit treatment were statistically significant Poisson analysis which is better suited to analyze rare events was able to demonstrate a significant reduction in some injury measures as a result of the auditing process Poisson probability analysis was used to predict future injury events based on existing data Auditing provided a means of exposing the organization to frequent and deliberate efforts to raise safety awareness and compliance The following conclusions were discovered safety auditing does have a positive impact on safety performance rates and numerical measures auditing provided a means of exposing the organization to frequent and deliberate efforts to raise safety awareness and compliance and statistical significance was discovered in reducing the number of lost time and combined lost time and OSHA recordable injuries Based on the results of this study follow up studies should be conducted on manufacturing organizations that have a safety performance higher than the Bureau of Labor Statistics industry average Studying an organization whose safety performance in the areas of first aid OSHA recordable and lost time rates which are further away from zero will give researchers a larger range for observation of improvement initiatives and performance
