Muggia,2012-12-06 Experimental chemotherapy continues to be at the forefront of cancer therapeutics Topics covered in the preceding volume on cancer chemotherapy in this series such as study of drugs by alkaline elution the development of the antimetabolite tiazofurin and the treatment of germ cell tumors have become informative references to current experimentalists and practitioners In even earlier volumes reviews of the platinum compounds anthracyclines and osteosarcoma represent topics associated with such rapid progress requiring a look back to provide the appropriate perspective Similarly we venture to predict that the topics in this volume will become useful landmarks for future drug development and disease strategies In the area of drug development what is being learned about old established antineoplastics is raising renewed expectations that it will be translated into improved applications and patient benefit For example we now have the ability to modulate the action of alkylating agents and fluorinated pyrimidines to achieve greater sensitivity A new compound for an old target trimetrexate an antifolate that does not polyglutamate will have a role not only in treatment of neoplastic diseases but also protozoal infection **Physicians' Cancer Chemotherapy Drug Manual 2024** Edward Chu,Vincent T. Adverse Effects of Cancer Chemotherapy: Anything New to Improve Tolerance and Reduce Sequelae? Kulmira Nurgali,R. Thomas Jagoe,Raquel Abalo,2018-06-12 Advances in anti cancer chemotherapy over recent years have led to improved efficacy in curing or controlling many cancers Some chemotherapy related side effects are well recognized and include nausea vomiting bone marrow suppression peripheral neuropathy cardiac and skeletal muscle dysfunction and renal impairment However it is becoming clearer that some chemotherapy related adverse effects may persist even in long term cancer survivors Problems such as cognitive cardiovascular and gastrointestinal dysfunction and neuropathy may lead to substantial long term morbidity Despite improvements in treatments to counteract acute chemotherapy induced adverse effects they are often incompletely effective Furthermore counter measures for some acute side effects and many potential longer term sequelae of anti cancer chemotherapy have not been developed Thus new insights into prevalence and mechanisms of cancer chemotherapy related side effects are needed and new approaches to improving tolerance and reduce sequelae of cancer chemotherapy are urgently needed The present Research Topic focuses on adverse effects and sequelae of chemotherapy and strategies to counteract them

Cancer Chemo- and Immunopharmacology G. Mathe, F. M. Muggia, 2012-12-06 Local treatment cures about 30 to 40% of cancers this proportion depending on the follow up required to establish it This means that 60 to 70% of the malignant neoplasias are disseminated either perceptibly leukemias visible metastases or imperceptibly forming a minimal imperceptible disease which local treatment leaves whether it consists of surgery radiotherapy or surgery plus radiotherapy When the neoplastic tissue is voluminous enough to be perceptible cures can be obtained with chemotherapy or chemo immunotherapy When the neoplastic disease is imperceptible made up of micrometastases it apparently can be cured by systemic postsurgical chemotherapy immunotherapy or chemoimmunotherapy Hence there is the need for intensive development of these medical therapies which are applied by the medical oncologist and at present consist of chemotherapy immunotherapy or chemoimmunotherapy These medical therapeutics can only grow with scientific development the main weapon of which is experimental and clinical pharmacology These volumes report the communications presented at the 1979 EORTC Annual Plenary Session on Cancer Chemo and Immunopharmacology Cancer Chemotherapy for the Veterinary Health Team Kenneth Crump, Douglas H. Thamm, 2011-04-18 Cancer Chemotherapy for the Veterinary Health Team is a clinically relevant and practical manual designed as a guide for the safe and effective administration of cancer chemotherapy Coverage includes patient assessment chemotherapy equipment drug preparation safety considerations handling administration waste disposal and management of chemotherapy side effects An alphabetical listing of common chemotherapy agents offers information on their uses indications and toxicities as well as administration guidelines for methods routes and speeds With background information for effectively communicating with clients including coverage of veterinary cancer surgery and radiation therapy the book provides specific strategies that address the challenging emotional issues surrounding the diagnosis and treatment of cancer in pets With particular insight into the technician's role Cancer Chemotherapy for the Veterinary Health Team is a must have reference for any practice offering chemotherapy Cancer Chemotherapy: an Introduction Terry J. Priestman, 2012-12-06 This book is intended as an introduction to the drug treatment of cancer It is almost ten years since the last edition was written In the intervening time there have been numerous developments in cancer chemotherapy and in order to cover these the majority of the text has been completely revised and rewritten In addition two new chapters have been introduced one on the safe handling of cytotoxic drugs and the other on biological response modifiers In order to incorporate this new information without any undue increase in the length of the text the chapters on a combined approach to treatment have been omitted This is not because interdisciplinary collaboration is no longer considered important but is a reflection of the fact that in most centres it has become the norm in cancer

management and its central role in successful treatment no longer needs to be stressed quite so strongly The four chapters in the last edition which dealt with the team approach to cancer therapy have been replaced by a single chapter on the place of chemotherapy in the overall treatment of cancer Unfortunately despite all the innovations of the last decade it has become increasingly clear that much of the promise offered by drug treatment during the 1960s and 1970s has not been fulfilled

The Cancer Chemotherapy Handbook David S. Fischer, Mary Kathryn Tish Knobf, Henry J. Durivage, 1997 Concisely written yet comprehensive in scope this new edition is a practical guide to the medical care and chemotherapeutic treatment of cancer patients It is formatted for easy access to the more than 85 specific drugs currently used in cancer treatment 12

Cancer Chemotherapy 1 Franco M. Muggia, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in-depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

New Drugs, Concepts and Results in Cancer Chemotherapy Franco M. Muggia, 1991-10-31 The decade of the 1990s will see an increasing emphasis on the modulation of chemotherapeutic drug selectivity and in the lock and key approach to new targets to control malignant proliferation The contents of this volume appropriately reflect these scientific undercurrents An emerging powerful tool of molecular pharmacology is described by Holcenberg and Wu Manipulation of genetic expression by modification of messenger RNA is now within our reach and the basic concepts are succinctly reviewed as a primer on future biochemical engineering of new anti cancer molecules Another concept that appears to be worthy of further study in both experimental and clinical chemotherapy concerns observations on the modulation of activity by the nucleoside transport inhibitor dipyridamole How potentiation of several anticancer drugs occurs has practical as well as theoretical ramifications discussed by Goel and Howell Finally O Dwyer and La Creta present a fresh look at sensitization of chemotherapy by the hypoxic radiosensitizer SR 2731

elucidating structure activity relationships It is hoped that the therapeutic index of active structures can be improved so as to achieve superior clinical results
