The Biomarkers, Mechanism, and Therapeutic Strategies of Cancer Immunotherapy Resistance Mou Peng, Xin Jin, Yunliang Gao, Xiaoxin Ren, 2025-07-30 Over the decades cancer immunotherapy has been a burgeoning science in medicine and an established pillar of therapeutic options for diverse cancer types Leading the way to success is mainly the discovery and development of immune checkpoint inhibitors ICIs and chimeric antigen receptor CAR T cell based therapies Under immunotherapy a portion of cancer patients enables to achieve a significant and durable remission with a longer survival time particularly in those with lung cancer melanoma genitourinary cancer etc However striking disparities still exist in the effectiveness of anticancer immunotherapy and cause a great challenge to select appropriate candidates A large part of cancer patients presents limited or no response to immunotherapy mainly attributable to immunotherapy resistance Despite of great strides already made the exact mechanism underlying immunotherapy resistance is still enigmatic Immunotherapy resistance is extremely complex and involves voluminous aspects such as tumor intrinsic factors aberrant expression of tumor antigens alterations of signaling pathways etc tumor extrinsic factors local tumor microenvironment etc and host related factors gender age etc More efforts should be made to characterize the underlying mechanism and uncover robust targets for a better response rate

Vaccines for Cancer Immunotherapy Nima Rezaei, Mahsa Keshavarz-Fathi, 2018-10-17 Therapeutic cancer vaccines represent a type of active cancer immunotherapy Clinicians scientists and researchers working on cancer treatment require evidence based and up to date resources relating to therapeutic cancer vaccines Vaccines for Cancer Immunotherapy provides a reference for cancer treatment for clinicians and presents a well organized resource for determining high potential research areas The book considers that this promising modality can be made more feasible as a treatment for cancer Chapters cover cancer immunology general approaches to cancer immunotherapy vaccines tumor antigens the strategy of allogeneic and autologous cancer vaccines personalized vaccines whole tumor antigen vaccines protein and peptide vaccines dendritic cell vaccines genetic vaccines candidate cancers for vaccination obstacles to developing therapeutic cancer vaccines combination therapy future perspectives and concluding remarks on therapeutic cancer vaccines Introduces the feasible immunotherapeutic vaccines for patients with different types of cancer Presents the status of past and current vaccines for cancer treatment Considers advantages and disadvantages of different therapeutic cancer vaccines Looks at the combination of vaccines and other modalities including immunotherapeutic and conventional methods Analyzes obstacles to development of therapeutic cancer vaccines Gives a view on future perspectives in the application of therapeutic cancer vaccines
