Almost Ring Theory:

Almost Ring Theory Ofer Gabber, Lorenzo Ramero, 2014-01-15 Almost Ring Theory Ofer Gabber, 2003 **Almost Ring Theory** Ofer Gabber, Lorenzo Ramero, 2003-08-11 The authors develop thorough and complete foundations for the method of almost étale extensions which is at the basis of Faltings approach to p adic Hodge theory The central notion is that of an almost ring Almost rings are the commutative unitary monoids in a tensor category obtained as a quotient $V \text{ Mod } S$ of the category $V \text{ Mod}$ of modules over a fixed ring V the subcategory S consists of all modules annihilated by a fixed ideal m of V satisfying certain natural conditions The reader is assumed to be familiar with general categorical notions some basic commutative algebra and some advanced homological algebra derived categories simplicial methods Apart from these general prerequisites the text is as self contained as possible One novel feature of the book compared with Faltings earlier treatment is the systematic exploitation of the cotangent complex especially for the study of deformations of almost algebras

Homological and Computational Methods in Commutative Algebra Aldo Conca, Joseph Gubeladze, Tim Römer, 2017-11-16 This volume collects contributions by leading experts in the area of commutative algebra related to the INdAM meeting Homological and Computational Methods in Commutative Algebra held in Cortona Italy from May 30 to June 3 2016 The conference and this volume are dedicated to Winfried Bruns on the occasion of his 70th birthday In particular the topics of this book strongly reflect the variety of Winfried Bruns research interests and his great impact on commutative algebra as well as its applications to related fields The authors discuss recent and relevant developments in algebraic geometry commutative algebra computational algebra discrete geometry and homological algebra The book offers a unique resource both for young and more experienced researchers seeking comprehensive overviews and extensive bibliographic references **Transcendence in Algebra, Combinatorics, Geometry and Number Theory** Alin Bostan, Kilian Raschel, 2021-11-02 This proceedings volume gathers together original articles and survey works that originate from presentations given at the conference Transient Transcendence in Transylvania held in Braşov Romania from May 13th to 17th 2019 The conference gathered international experts from various fields of mathematics and computer science with diverse interests and viewpoints on transcendence The covered topics are related to algebraic and transcendental aspects of special functions and special numbers arising in algebra combinatorics geometry and number theory Besides contributions on key topics from invited speakers this volume also brings selected papers from attendees **p -adic Hodge Theory, Singular Varieties, and Non-Abelian Aspects** Bhargav Bhatt, Martin Olsson, 2023-03-28 This proceedings volume contains articles related to the research presented at the 2019 Simons Symposium on p adic Hodge theory This symposium was focused on recent developments in p adic Hodge theory especially those concerning non abelian aspects This volume contains both original research articles as well as articles that contain both new research as well as survey some of these recent developments Nonlinear and Optimal Control Theory Andrei A. Agrachev, A. Stephen Morse, Eduardo D.

Sontag, Hector J. Sussmann, Vadim I. Utkin, 2008-06-24 The lectures gathered in this volume present some of the different aspects of Mathematical Control Theory Adopting the point of view of Geometric Control Theory and of Nonlinear Control Theory the lectures focus on some aspects of the Optimization and Control of nonlinear not necessarily smooth dynamical systems Specifically three of the five lectures discuss respectively logic based switching control sliding mode control and the input to the state stability paradigm for the control and stability of nonlinear systems The remaining two lectures are devoted to Optimal Control one investigates the connections between Optimal Control Theory Dynamical Systems and Differential Geometry while the second presents a very general version in a non smooth context of the Pontryagin Maximum Principle The arguments of the whole volume are self contained and are directed to everyone working in Control Theory They offer a sound presentation of the methods employed in the control and optimization of nonlinear dynamical systems

Enumerative Invariants in Algebraic Geometry and String Theory Marcos Marino, Michael Thaddeus, Ravi Vakil, 2008-08-22 Starting in the middle of the 80s there has been a growing and fruitful interaction between algebraic geometry and certain areas of theoretical high energy physics especially the various versions of string theory Physical heuristics have provided inspiration for new mathematical definitions such as that of Gromov Witten invariants leading in turn to the solution of problems in enumerative geometry Conversely the availability of mathematically rigorous definitions and theorems has benefited the physics research by providing the required evidence in fields where experimental testing seems problematic The aim of this volume a result of the CIME Summer School held in Cetraro Italy in 2005 is to cover part of the most recent and interesting findings in this subject **p-adic Hodge Theory** Bhargav Bhatt, Martin

Olsson, 2020-06-15 This proceedings volume contains articles related to the research presented at the 2017 Simons Symposium on p adic Hodge theory This symposium was focused on recent developments in p adic Hodge theory especially those concerning integral questions and their connections to notions in algebraic topology This volume features original research articles as well as articles that contain new research and survey some of these recent developments It is the first of three volumes dedicated to p adic Hodge theory **Proceedings of the ...
