Tragic Investment R. James Addington, 2019-06-01 America's investment in race and racial oppression was central to its early years as a nation a theme that dates back to Europe's earliest colonial efforts in the Western Hemisphere Some of the contemporary consequences for communities of color are clear Numerous studies routinely quantify racial disparities in virtually every social arena But are there negative consequences of this historical investment for white people R James Addington explores that weighty topic while seeking to answer questions such as How do we repair the damage done to communities as a result of our racial history Is racial oppression related to our ability to respond to ecological challenges Does our investment in racial oppression jeopardize our nation's future Addington suggests that racism harms us all and he pays particular attention to the subtle ways white people are damaged He also suggests that race sabotages the nation's capacity to negotiate the challenges the future poses Explore how overcoming racism and shaping a sustainable resilient society are bound together in *Tragic Investment*

English abstract Residual life prediction is the technique which demonstrates how reliable a particular electronic system or
component works under in specific operating conditions The remaining useful life relies on the failure rate of a component
and on the operating conditions of a device This failure rate drifts for the duration of the life of the item with time Life is an
important aspect while choosing the electronic hardware Residual life estimation and life prediction are two distinct terms
The importance of life estimation is to evaluate the remaining useful life of a specific component under the different stress
parameters As an increasing number of components are integrated on to a chip the chances of failure increase as the
different parts have their own stress factors and different working conditions So the condition monitoring strategies are
utilized which enhances the reliability of a component and a suitable move to be made before any harmful breakdown
happens The electronic circuits need a failure estimation technique to protect the system from unavoidable failures Residual
life estimation of electronic components is an important fact these days as electronic components and devices becomes a
great need of society Residual life prediction is predicting the remaining useful life of a component or device based on
various failure factors of any component and it also depends on the operating conditions Many methods for predicting the life
of electronic components have been developed The life of electronic components can be predicted by creating an intelligent
system for the failure analysis The capability to predict the life of electronic components is a key to prevent the sudden costly
failure and it will increase the overall performance and reliability of a system So remaining useful life prediction is an
important factor for every active and passive electronic component such as resistor capacitor and diode etc **Evangelical**
