A General Theory Of Equilibrium Selection In Games Paperback:

A General Theory of Equilibrium Selection in Games John C. Harsanyi, Reinhard Selten, 1988 The authors two of the most prominent game theorists of this generation have devoted a number of years to the development of the theory presented here and to its economic applications They propose rational criteria for selecting one particular uniformly perfect equilibrium point as the solution of any noncooperative game And because any cooperative game can be remodelled as a noncooperative bargaining game their theory defines a one point solution for any cooperative game as well By providing solutions based on the same principles of rational behavior for all classes of games both cooperative and noncooperative both those with complete and with incomplete information Harsanyi and Selten s approach achieves a remarkable degree of theoretical unification for game theory as a whole and provides a deeper insight into the nature of game theoretic rationality The book applies this theory to a number of specific game classes such as unanimity games bargaining with transaction costs trade involving one seller and several buyers two person bargaining with incomplete information on one side and on both sides The last chapter discusses the relationship of the authors theory to other recently proposed solution concepts particularly the Kohlberg Mertens stability theory John C Harsanyi is Flood Research Professor in Business Administration and Professor of Economics University of California Berkeley Reinhard Selten is Professor of Economics Institute of Social and Economic Sciences University of Bonn Federal Republic of Germany
