discovery accelerating after the launch of NASA's Transiting Exoplanet Survey Satellite and the Webb Space Telescope In *The Little Book of Exoplanets* Princeton astrophysicist Joshua Winn offers a brief and engaging introduction to the search for exoplanets and the cutting edge science behind recent findings In doing so he chronicles the dawn of a new age of discovery one that has rapidly transformed astronomy and our broader understanding of the universe Scientists now know that many Sun like stars host their own systems of planets some of which may resemble our solar system and include planets similar to the Earth But Winn tells us the most remarkable discoveries so far have been of planets with unexpected and decidedly un Earth like properties which have upended what we thought we knew about the origins of planetary systems Winn provides an inside view of the sophisticated detective work astronomers perform as they find and study exoplanets and describes the surprising sometimes downright bizarre planets and systems they have found He explains how these discoveries are revolutionizing astronomy and he explores the current status and possible future of the search for another Earth Finally drawing on his own and other scientists work he considers how the discovery of exoplanets and their faraway solar systems changes our perspectives on the universe and our place in it
