When a net force acts on an object, the object's motion will change. This means that the object will either start moving, stop moving, or change direction. Understanding how forces act on objects is important in many situations, from a person walking to a rocket launching into space.</p> <p>Gravity is the force that pulls objects toward each other. It is a contact force that acts on all objects with mass. The force of gravity on an object is directly proportional to the object's mass. This means that a larger object will experience a greater force of gravity than a smaller object.</p> <p>Friction is a force that opposes motion between two surfaces in contact. It is a contact force that acts on all objects with mass. The force of friction on an object is directly proportional to the normal force acting on the object.
