11 Editing Patches

The SGS comes with 24 predefined patches that have been programmed at the factory. However, the SGS offers many more possibilities for combining effects in innovative ways. To discover these possibilities, we recommend that you try out the editing function, which lets you create your own patches. The mode in which patches can be edited is called the Edit mode.

To switch from normal Play mode to Edit mode, briefly press the EDIT key. Do not keep the EDIT key depressed, because if the key is held for 1 second, the Bank Hold mode will be activated.

While Edit mode is active, each push of the EDIT key cause the parameter cursor to move one position down. The flashing position shows which module is selected for editing. The relation between parameter cursor LEDs and modules is as shown below:

1st parameter cursor LED : COMP module setting
2nd parameter cursor LED : DIST module distortion type setting
3rd parameter cursor LED : DIST module distortion gain setting
4th parameter cursor LED : ZNR and AMP block settings
5th parameter cursor LED : EQ module setting
6th parameter cursor LED : MOD module setting
7th parameter cursor LED : DLY/REV module setting
8th parameter cursor LED : PATCH level setting

Use VALUE +/− keys to change parameters.
For an explanation of the various parameters, please refer to the section "Effect Parameters".
When the EDIT key is pressed while the 8th parameter cursor LED flashes, the Edit mode is canceled and the unit returns to the Play mode.

(1) While still in Play mode, select the patch you wish to edit.
(2) Press the EDIT key to activate the Edit mode.

Immediately after switching from the Play mode to the Edit mode, the parameter cursor flashes at the highest position (COMP module, regardless of which patch was selected). The COMP module setting of the current patch is shown on the display.

(1) Use the EDIT key to select the parameter you wish to change.
(2) Use the VALUE +/− keys to adjust the parameter.
(3) When the 8th parameter cursor LED is flashing, press the EDIT key to return to the Play mode.

12 Effect Parameters

COMP module

Compressor
The input signal from the guitar is compressed to achieve a uniform volume level.

Setting range: C 1 – C 9

Higher values result in stronger compression.

Limiter
Limits the input signal with faster response than the compressor effect. Serves to prevent overload of other modules.

Setting range: L 1 – L 9

Higher values result in more effective limiting.

Auto Wah
Wide the effect, emphasized frequencies are shifted automatically depending on the dynamics of the input signal.

Setting range: A 1 – A 9

Higher values result in a more pronounced auto wah effect.

A5 – A9
Compressor and auto wah are used together. Higher values result in a more pronounced auto wah effect. Compressor intensity is fixed.

Pedal Wah
With the effect, emphasized frequencies are shifted using an optional expression pedal FP01 connected to the CONTROL IN jack.

Setting range: P 1 – P 4

Higher values result in a higher pedal wah center frequency.

P5 – P9
Compressor and pedal wah are used together. Higher values result in a higher pedal wah center frequency. Compressor intensity is fixed.

DIST module

Distortion Type
A total of eight effect types are available, including seven distortion distortion types and one effect which produces a sound similar to an electric acoustic guitar.

Ac (Acostic)
Gives a sound similar to an electric acoustic guitar.

-9I (Stylus)
Gives slight distortion when strings are put fixed strongly.

Od (Overdrive)
Extended overdrive distortion similar to driving a tube amp.

dS (Distortion)
Hard distortion similar to driving a three-stack amp.

5L (Stack)
Overdrive sound with a firm core.

Fu (Fuzz)
Creates sound with fat bass.

Ld (Lead)
Bright and smooth distortion.

ME (Metal)
Unsettling type sound.

Distortion Gain
Sets the distortion intensity and the depth of the Automatic effect.

Setting range: 1 – 30

Higher values result in stronger distortion or greater depth.

ZNR/AMP block

ZNR module
Determines the settings for the ZOOM Noise Reduction.

AMP module
Simulates the sonic characteristics of a guitar amplifier.

Both modules together form the ZNR/AMP block.

Setting range: 1 – 9

Higher values result in more effective noise reduction for the signal condition. Choose the highest setting that will reinstate noise without making the instrument sound unnatural at the trailing edge (when the sound decays into silence).

A 1 – A 9
A1: Amp simulation only is active.
A2 – A9: ZNR is also used. Higher values result in more effective noise reduction.

EQ module

3band EQ
Allows boost and cut in the presence, high, midrange, and low range, with 50 available settings.

Setting range: 1 – 10

Lower values result in a stronger high-range cut and low-range boost.

1 1 – 20
Lower values result in a lower boosted frequency.

2 1 – 2*
Lower values result in a stronger presence-range boost.

25
Flatly flat frequency response.

26 – 30
Higher values result in a stronger high-range boost.

3 1 – 40
Higher values result in a higher boosted frequency.

4 1 – 50
Higher values result in a stronger presence-range boost and low-range boost, giving a firm, solid sound.

Phase Shift
Applies a phase-shifted component to the direct sound. The amount of shift varies periodically, giving a breathing effect.

Setting range: P 1 – P 9

Higher values result in a stronger effect.

MOD module

Chorus
Simple 2-phase chorus which adds a component with periodically changing pitch to the direct sound. Suitable for enhancing body while retaining a clean sound.

Setting range: C 1 – C 9

Higher values result in stronger effect.

Flanger
Adds a very short delay to the direct sound and makes the delay time periodically, resulting in a positive sound character. Can also be used together with the chorus effect.

Setting range: F 1 – F 6

Higher values result in faster flanger modulation.

F 1 – F 9
Flanger and chorus are used together. Higher values result in faster flanger modulation. Chorus is fixed.

Doubling
Overlays the direct sound with a short delay component, creating the impression of several players well reducing the sound (more full-bodied). Can also be used together with the chorus effect.

Setting range: d 1 – d 5

Higher values result in longer delay time.

d 1 – d 9
Doubling and chorus are used together. Higher values result in longer doubling delay time. Chorus is fixed.

Step
Randomly changing filter creates an unusual arpeggio effect. Can also be used together with the chorus effect.

Setting range: 5 1 – 56

Higher values result in faster speed.

5 1 – 59
Step and chorus are used together. Higher values result in faster step speed. Chorus is fixed.

Pitch Shift
Can be used as dual-voice pitch shifter or as a pitch shift + chorus effect.

P 1 1 octave down pitch shift
P 2 5 step down harmony is added.
P 3 3 step down harmony and chorus are mixed in.
P 4 4 step up harmony is mixed in.
P 5 5 step up harmony and chorus are mixed in.
P 6 1 octave up pitch shift
P 7 Slight up/down pitch shift sound is mixed in, for low-fluctuation chorus effect.
P 8 Slight up/down pitch shift sound is mixed in, for dual-voice pitch shift
P 9 1 octave up pitch shift sound is mixed in, for dual-voice pitch shift
Pd Using FP01 connected to CONTROL IN jack, pitch can be connected to two chromatic down.
Pu Using FP01 connected to CONTROL IN jack, pitch can be controlled to one octave up.

DLY/REV module

Delay
Conventional digital delay with a delay time of up to 370 msec. By connecting the effect to a memo, you can achieve a ping-pong delay.

Setting range: d 1 – d 9

Higher values result in longer delay time.
Mix and feedback are also optimized.

Hall Reverb
Simulates the acoustics of a hall.

Setting range: H 1 – H 9

Higher values result in longer reverb time.
Mix setting is also optimized.

Room Reverb
Simulates the acoustics of a room.

Setting range: r 1 – r 9

Higher values result in longer reverb time.
Mix setting is also optimized.

PATCH Level

Patch Level
Allows setting the level of individual patches. This can be mixed for each patch like the other parameters.

Setting range: 1 – 30

Higher values result in higher level.

1 Selecting parameters to change

As outlined in "Editing Patches", parameters to be edited are selected by repeatedly pressing the EDIT key, but you can also use the patch pedals for this purpose.

Pressing the patch UP pedal (right pedal) moves the parameter cursor (the selected parameter) up.

Pressing the patch DOWN pedal (left pedal) moves the parameter cursor (the selected parameter) down.

2 Effect module on/off switching

Each effect module in the SGS can be considered as a single independent effect device. Adjusting parameters then is equivalent to selecting the type of effect device or turning the knobs of an effect device. When a collection of effect modules as a collection of effect devices connected in various ways and set to ON or OFF.

As you will have, if you have used several individual effect devices in a performance before, not all devices will be switched on at all times. Depending on the mood of the song and other factors, devices will be switched on and off at different combinations. The same applies to the SGS: turning certain effect modules on or off and off (bypass) and different aspects to creating a certain sound.

(Except for the distortion gain.)

parameter cursor position and patch level setting (8 local parameter cursor setting), the flashing parameter cursor indicates that the corresponding effect module can be turned on or off.

The OFF and ON module on/off setting works together. When wishing to double them individually, you must do this by setting the parameters accordingly.

Effect modules can be switched on and off in these ways.

1. Using the VALUE +/− keys.
When using the VALUE +/− keys to increase the parameter value, the setting following the maximum value (or the minimum value) is "off". Depending on whether you set the VALUE + key to decrease the parameter value, the setting below the minimum value is the "effect off" setting. When the VALUE + key is pressed once at the "effect off" setting, the effect

is turned on and the previous value is set. When the VALUE − key is pressed once at the "effect off" condition, the effect is turned on and the current value is set.

2. Using a shortcut
Pressing the VALUE +/− keys together for an effect module function as a shortcut. Repeating the shortcut procedure several times turns the effect off. Positioning the shortcut when the effect is off turns it on and sets the minimum parameter value.

3. Using the patch pedals
Pressing both patch pedals together for an effect module turns the effect off. Pressing both patch pedals together when the effect is off turns it on and revives the previously used parameter value.

Effect off indication:
effect on = oF

---

3 Parameter setting shortcut

Normally, parameter values are set by tapping the VALUE +/− keys once/several times. To allow quick adjustments to effect modules when connected, or to select quickly the various effects, you can use the shortcut function which is activated by pressing both VALUE keys simultaneously. For example, if you are working with the "Delay" parameter of the DLY/REV module and the current setting is "27", you would need to press the VALUE +/− key 10 times to set the "Room" effect to "17". However, you can achieve the same effect by activating the shortcut twice and then pressing the VALUE + key 4 times.

4 Volume control with FP01

When the optional expression pedal FP01 is connected via the CONTROL IN jack, it can also be used for adjusting the output volume of the SGS. Because of the COMP module parameter is set to a range which activates the pedal volume function, pedal operation can set to pedal (in ON or P4, this setting has priority and the pedal controls the volume.

In other cases, the pedal acts as the volume between the EQ module of the SGS. The pedal volume is connected after the SGS; the level can be adjusted without affecting the return of reverb and delay effects.

5 Master level adjustment

The SGS also lets you set the overall output level. The master level can be adjusted in Play mode as follows. Keep both VALUE keys depressed for at least 1 second. The master level setting is shown. While the level is displayed, you can use the VALUE +/− keys to change it. The setting range is 0–30. At "30", the level is identical to the individual patch level.

The master level setting is not stored by the unit. After the power has been turned off, the master level must be set again.
