**The Biomimicry Revolution** Henry Dicks, 2023-03-14 Winner 2024 Symposium Book Award Canadian Society for Continental Philosophy Modernity is founded on the belief that the world we build is a human invention not a part of nature The ecological consequences of this idea have been catastrophic We have laid waste to natural ecosystems replacing them with fundamentally unsustainable human designs With time running out to address the environmental crises we have caused our best path forward is to turn to nature for guidance In this book Henry Dicks explores the philosophical significance of a revolutionary approach to sustainable innovation biomimicry The term describes the application and adaptation of strategies found in nature to the development of artificial products and systems such as passive cooling techniques modeled on termite mounds or solar cells modeled on leaves Dicks argues that biomimicry typically seen as just a design strategy can also serve as the basis for a new environmental philosophy that radically alters how we understand and relate to the natural world By showing how we can imitate emulate and learn from nature biomimicry points us toward a genuinely sustainable way of inhabiting the earth Rooted in philosophy The Biomimicry Revolution has profound implications spanning the natural sciences design architecture sustainability studies science and technology studies and the environmental humanities It presents a sweeping reconception of what philosophy can be and offers a powerful new vision of terrestrial existence
