When multiple forces act on an object, they can combine to cause an object to accelerate, decelerate, or change direction. Understanding how forces and acceleration combine to cause an object to change its motion is a key concept in physics.</p> <p>Newton's second law states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force on an object is zero, the acceleration will be zero, and the object will continue moving in a straight line at a constant velocity.</p> <p>Newton's third law states that for every action, there is an equal and opposite reaction. This means that if one object exerts a force on another object, the second object exerts an equal and opposite force on the first object. This is why you feel a force when you push against a wall.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Electromagnetic force Frictional force Centrifugal force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Normal force Force from a spring Force of gravity Force from a rope Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Electromagnetic force Frictional force Centrifugal force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Normal force Force from a spring Force of gravity Force from a rope Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Electromagnetic force Frictional force Centrifugal force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Normal force Force from a spring Force of gravity Force from a rope Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Electromagnetic force Frictional force Centrifugal force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Normal force Force from a spring Force of gravity Force from a rope Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Electromagnetic force Frictional force Centrifugal force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Normal force Force from a spring Force of gravity Force from a rope
