systematically and integrally introduces the new security management theories and methods in the e-commerce environment. Based on the perspective of dynamic governance of the whole process starting from the theoretical framework, this book analyzes the gap between the current situation and requirements of security management, defines its nature, function, object, and system, and designs and constructs the whole process security management organization and operation system of e-commerce. It focuses on the core and most prominent risk control links, i.e., security impact factors in e-commerce security, including e-commerce information and network security risk, e-commerce transaction risk, e-commerce credit risk, e-commerce personnel risk, etc. Then the tools and methods for identifying and controlling various risks are described in detail. At the same time, management decision making and coordination are integrated into the risk management. Finally, a closed loop of self-optimization is established by a continuous optimization evolution path of e-commerce security management.

Developing an Enterprise Continuity Program Sergei Petrenko, 2022-09-01. The book discusses the activities involved in developing an Enterprise Continuity Program (ECP) that will cover both Business Continuity Management (BCM) as well as Disaster Recovery Management (DRM). The creation of quantitative metrics for BCM are discussed as well as several models and methods that correspond to the goals and objectives of the International Standards Organisation (ISO) Technical Committee ISO/TC 292 Security and Resilience. Significantly, the book contains the results of not only qualitative but also quantitative measures of Cyber Resilience, which for the first time regulates organizations' activities on protecting their critical information infrastructure. The book discusses the recommendations of the ISO 22301:2019 standard Security and Resilience Business Continuity Management Systems Requirements for improving the BCM of organizations based on the well-known Plan-Do-Check-Act (PDCA) model. It also discusses the recommendations of the following ISO management systems standards that are widely used to support BCM: The ISO 9001 standard Quality Management Systems, ISO 14001 Environmental Management Systems, ISO 31000 Risk Management, ISO/IEC 20000-1 Information Technology Service Management, ISO/IEC 27001 Information Management security systems, ISO 28000 Specification for security management systems for the supply chain, ASIS ORM 1:2017, NIST SP800-34, NFPA 1600:2019, COBIT 2019, RESILIA, ITIL V4, and MOF 4.0, etc. The book expands on the best practices of the British Business Continuity Institute's Good Practice Guidelines 2018 Edition along with guidance from the Disaster Recovery Institute's Professional Practices for Business Continuity Management 2017 Edition. Possible methods of conducting ECP projects in the field of BCM are considered in detail. Based on the practical experience of the author, there are examples of Risk Assessment (RA) and Business Impact Analysis (BIA), examples of Business Continuity Plans (BCP), Disaster Recovery Plans (DRP), and relevant BCP/DRP testing plans. This book will be useful to Chief Information Security Officers, internal and external Certified Information Systems Auditors, senior managers within companies who are responsible for ensuring business continuity and cyber stability, as well as teachers and students of MBA's CIO and CSO programs.
