

Key concepts in disability

Debates have raged within the fields of philosophy, health, and the social sciences about what constitutes disability and how it should be measured. Greater consensus has now emerged, as evidenced by the International Classification of Functioning, Disability and Health (ICF, 2001)¹ and the UN Convention on the Rights of Persons with Disabilities (2006).²

Both the ICF and the Convention view disability as the outcome of complex interactions between health conditions and features of an individual's physical, social, and attitudinal environment that hinder their full and effective participation in society. Many of us will experience disability temporarily or permanently at some point in our lives. Most who survive to old age will be increasingly disabled in their final years.³

Traditionally, people with disabilities have been viewed through a medical lens.⁴ Disability has been narrowly equated with an individual's health status, impairment, or capacity limitation. This overly medicalised view fails to address the social factors, discrimination, prejudice, and inaccessibility,⁵ that prevent full participation and contribute to the overall disability experience. Disability is a social issue and by addressing these barriers, society can provide individuals with disabilities the opportunity to exercise their rights on an equal basis with all others.

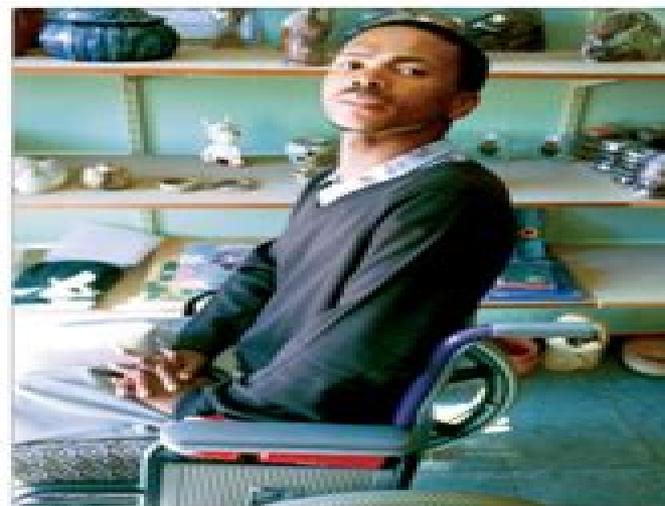

Removing barriers is not a matter of goodwill or charity, but of human rights. People with disabilities have the same human rights as everyone else, but these rights have not historically been respected.⁶ People with disabilities have often been denied the right to education and work, to marry and raise a family, to participate in community life, to choose to what extent they will use available health-care services, and indeed the right to life itself. While all categories of rights apply to people with disabilities, additional measures (eg, access to support services, vocational rehabilitation, or other habilitation services) might need to be put in place to enable individuals with disabilities to exercise their rights effectively. Society is obliged to do all that can be done to facilitate the enjoyment of these human rights by people with disabilities. The failure to remove barriers is another kind of violation of such rights.

Disability is a neglected development issue. People with disabilities are disproportionately represented among the world's poor and tend to be poorer than

those without disabilities.⁷ Poverty might cause disability through malnutrition, dangerous working or living conditions, and poor health care.⁸ Disability can cause poverty by preventing the participation of individuals with disabilities in education and the economic and social life of their communities.⁹

People with disabilities require the same range of health services for the diagnosis and treatment of disease, or the promotion, maintenance, and restoration of health as people without disabilities. When disabled people have specific health problems related to their disability, they also require services designed to minimise and prevent further problems in functioning, for example through appropriate medical care and health-related rehabilitation.¹⁰ When their health condition has stabilised, there might be no further need for specific medical interventions.

Disability is multifactorial and complex. Interventions to alleviate the disadvantages experienced by people with disabilities need to be appropriate. Responses depend on the disability and on individual choice, and range from medical care through rehabilitation, support services, and psychological interventions, to
