Earth is home to an estimated 8 million animal species 600 000 fungi 300 000 plants and an undetermined number of microbial species Of these animal fungal and plant species an estimated 75% have yet to be identified Moreover the interactions between these species and their physical environment are known to an even lesser degree At the same time the earth s biota faces the prospect of climate change which may manifest slowly or extremely rapidly as well as a human population set to grow by two billion by 2045 from the current seven billion Given these major ecological changes we cannot wait for a complete biota data set before assessing planning and acting to preserve the ecological balance of the earth This book provides comprehensive coverage of the scientific and engineering basis of the systems ecology of the earth in 15 detailed peer reviewed entries written for a broad audience of undergraduate and graduate students as well as practicing professionals in government academia and industry The methodology presented aims at identifying key interactions and environmental effects and enabling a systems level understanding even with our present state of factual knowledge      *The Ecosystem Approach* David Waltner-Toews, James J. *Hybrid Solutions for the Modelling of Complex Environmental Systems* Christian E. Vincenot,Stefano Mazzoleni,Lael Parrott,2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology

McCann, 2007-05-08 Fluctuations in the environmental conditions impacting life are ubiquitous These fluctuations induce changes in the vital processes occurring within individual organisms such as cellular metabolism and the ecological processes occurring among individuals such as competition mutualism and predation ultimately leading to observable fluctuations in the commonly measured characteristics of ecological systems From a very simple perspective these processes are all modulators of environmental variability We might best be able to understand the final form of this modulation the impact of environmental variability on ecological systems by building from an understanding of the responses of these life processes in isolation to an understanding of their responses in harmony The impact of environmental variability on ecological systems is an issue that has been at the forefront of ecological research for many years Research is taking place on many fronts including theoretical mathematical based analyses natural ecosystem observation and experimentation This book brings together contributions from these three fronts to provide readers with a comprehensive look at the challenges for ecological systems and ecological research alike **Goldstein V.
