

# Alternative Computing Architectures As a Solution to the Application of Moore's Law Energy Consumption

Energy consumption is a major concern for data centers and cloud providers. As the number of servers and the amount of data processed increase, the energy consumption of data centers is growing rapidly.

Moore's Law states that the number of transistors on a microchip doubles approximately every two years, leading to exponential growth in computing power. However, this growth is not sustainable due to the increasing energy consumption of transistors.

## Alternative Computing Architectures

### Quantum Computing

Quantum computing uses quantum bits (qubits) instead of classical bits, allowing for much faster processing of certain types of problems.

Quantum computing is still in its early stages, but it has the potential to revolutionize computing.

### Neuromorphic Computing

Neuromorphic computing is designed to mimic the structure and function of the human brain, allowing for more efficient processing of complex tasks.

Neuromorphic computing is still in its early stages, but it has the potential to revolutionize computing.
