

The Art of Thinking

When children are asked to do a project in school, what is the first thing most of us do? Rush to search on the internet? Does it help children develop their thinking skills? There is no denying that the internet is a very valuable tool but are there some things that parents can do before they consult the net to look for the answers? Are there some strategies that parents can use to develop the thinking skills in children? Here are some suggestions.

Ask Open-Ended Questions

This allows longer conversations and discussions and can also open doors for more interesting dialogue. For example, what is your favourite memory with your friends and why? What could be the difficulties faced by people when there is water scarcity? Tell me more about the picture you have drawn.

Use Analogies to Promote Thinking

The purpose of an analogy is to demonstrate how two things are similar while ultimately illustrating their resemblance. They can be used to introduce a new subject by relating it to previously learned information. Some examples are, dog is to bark as lion is to roar, they are as busy as a bee.

This helps to encourage thinking. Some examples include asking questions like, could you elaborate on that point, will you express that point in another way, would you give me an example?

In-depth Questioning

Reflecting on our experiences and learnings leads to increased self-awareness. It helps us understand our strengths and weaknesses and enhances our decision-making and problem-solving skills. It also gives us the opportunity to consider our thoughts, feelings, and queries about a particular topic. This leads to clearer understanding of concepts.
