Asteroid Impact:

The Asteroid Impact Connection of Planetary Evolution Andrew Y. Glikson, 2013-03-25 When in 1981 Louis and Walter Alvarez the father and son team unearthed a tell tale Iridium rich sedimentary horizon at the 65 million years old Cretaceous Tertiary boundary at Gubbio Italy their find heralded a paradigm shift in the study of terrestrial evolution Since the 1980s the discovery and study of asteroid impact ejecta in the oldest well preserved terrains of Western Australia and South Africa by Don Lowe Gary Byerly Bruce Simonson Scott Hassler the author and others and the documentation of new exposed and buried impact structures in several continents have led to a resurgence of the idea of the catastrophism theory of Cuvier previously largely supplanted by the uniformitarian theory of Hutton and Lyell Several mass extinction of species events are known to have occurred in temporal proximity to large asteroid impacts global volcanic eruptions and continental splitting Likely links are observed between asteroid clusters and the 580 Ma acritarch radiation end Devonian extinction end Triassic extinction and end Jurassic extinction New discoveries of 3 5 3 2 Ga old impact fallout units in South Africa have led Don Lowe and Gary Byerly to propose a protracted prolongation of the Late Heavy Bombardment 3 95 3 85 Ga in the Earth Moon system Given the difficulty in identifying asteroid impact ejecta units and buried impact structures it is likely new discoveries of impact signatures are in store which would further profoundly alter models of terrestrial evolution *What If an Asteroid Hit Earth* Holly Cefrey, 2002-03-01 Discusses what might happen if an asteroid hit the Earth High Interest Books

Comet/Asteroid Impacts and Human Society Peter T. Bobrowsky, Hans Rickman, 2007-06-10 Leading specialists in various disciplines were first invited to a multidisciplinary workshop funded by ICSU on the topic to gain a better appreciation and perspective on the subject of comet asteroid impacts as viewed by different disciplines This volume provides a necessary link between various disciplines and comet asteroid impacts *Asteroids Impacts, Crustal Evolution and Related Mineral Systems with Special Reference to Australia* Andrew Y. Glikson, Franco Pirajno, 2018-03-12 This book presents a comprehensive overview of Australian impact structures and related mineralization including a discussion of the significance of many of these structures for crustal evolution The book focuses in particular on Archaean impact ejecta fallout units in the Pilbara Craton of Western Australia large exposed and buried impact structures and on the geophysical evidence for possible to probable impact structures Thanks to their long term geological stability Precambrian and younger terrains in the Australian continent contain 38 confirmed impact structures and 43 ring and dome structures many of which constitute possible to probable asteroid impact structures The impact structures have been the subject of more than half a century of studies and range from several tens of meter large craters to buried structures larger than 100 km in diameter Discoveries of impact fallout units in the Pilbara Craton have defined the Pilbara as one of the two best documented terrains where Archaean impact ejecta fallout deposits are identified the other terrain being the Kaapvaal Craton in southern Africa A synthesis of evidence from both cratons indicates periods of large asteroid bombardments during 3 47 2 48 billion years ago

including peak bombardment about 3.25 billion years ago. The latter period coincides with an abrupt transformation of an early Archaean granite greenstone crust to mid to late Archaean semi continental crustal regimes underpinning the significance of heavy asteroid impact events for crustal evolution. Apart from proven impact structures, Australian terrains display a range of circular features including morphological and drainage rings, circular lakes, volcanic craters, tectonic domes, oval granite bodies, mafic igneous plugs, salt diapirs, and magnetic gravity and seismic anomalies, many of which are of a likely impact origin. Thermal and hydrothermal processes associated with impact cratering bear important consequences for the formation of mineral deposits such as Ni at Sudbury, Pb-Zn at Siljan, and Kentland. Impact structures may also provide sites for the accumulation of hydrocarbons, whereas in some instances, fracturing associated with impact structures allows outward migration of oil and gas.

Asteroid Impact Risk Josep M. Trigo-Rodríguez, 2022-03-08. This book describes the complexity of impact hazards associated with asteroids and comets. The challenge in this regard lies in the heterogeneous nature of these bodies that endanger our planet, which is why we are conducting new experiments to better understand their unique physicochemical properties. Several generations of astronomers have tracked and mapped the orbits of asteroids and comets over the past few centuries, and telescopic surveys have only begun to discover new interstellar objects. In addition, cutting edge software allows our computers to combine the orbits of these elusive bodies to study how they evolve over time and seek to match asteroid complexes as fragments of asteroidal and cometary disruptions. Impact hazards represent one of the greatest threats to the survival of human beings in the medium term. Geological studies show that the stratigraphic record holds clear geological evidence of these rare but transcendental encounters in the history of life on our planet. The study and quantification of past catastrophes can give us clues to face future challenges in the form of potential impacts. Further, it would be illogical to assume that Earth's interaction with space is limited to major impacts. Every night, Earth is struck by millions of particles, and dozens of meteor showers occur around the globe every year. The study of lake and ocean sediments reveals the magnitude of the continuous contribution of interplanetary matter reaching Earth, roughly 100,000 tons per year. Accordingly, the goal of this book is to underscore the need for society-wide awareness of the dangers associated with asteroid and comet impacts on the basis of scientific evidence, and with no intention of sparking alarmism. After all, we ourselves may only be the fruit of an opportunity given to mammals sixty-five million years ago to evolve after the conflagration that would be the downfall of the dinosaurs. If we have learned to read Earth's geological history, we should consider ourselves a very fortunate species, and its teachings should equip us to face this problem. The book also emphasizes the role of space missions to gain insights on these bodies, particularly describing the relevance of the DART, NASA, and Hera/ESA missions to deflect and study Dimorphos, respectively, the small satellite of the Didymos binary asteroid.

Asteroid Impact Lisa Owings, 2019-08-01. The Earth is constantly bombarded with space matter. Most burns up before it reaches the surface. But what if a giant asteroid was headed our way? In this high interest title, the end of the world becomes a reality as a
