## Covering Codes:

*Covering Codes* G. Cohen, I. Honkala, S. Litsyn, A. Lobstein, 1997-04-14 The problems of constructing covering codes and of estimating their parameters are the main concern of this book It provides a unified account of the most recent theory of covering codes and shows how a number of mathematical and engineering issues are related to covering problems Scientists involved in discrete mathematics combinatorics computer science information theory geometry algebra or number theory will find the book of particular significance It is designed both as an introductory textbook for the beginner and as a reference book for the expert mathematician and engineer A number of unsolved problems suitable for research projects are also discussed

**Classification Algorithms for Codes and Designs** Petteri Kaski, Patric R.J. Östergård, 2006-02-03 A new starting point and a new method are requisite to insure a complete classification of the Steiner triple systems of order 15 This method was furnished and its tedious and difficult execution undertaken by Mr Cole F N Cole L D Cummings and H S White 1917 129 The history of classifying combinatorial objects is as old as the history of the objects themselves In the mid 19th century Kirkman Steiner and others became the fathers of modern combinatorics and their work on various objects including what became later known as Steiner triple systems led to several classification results Almost a century earlier in 1782 Euler 180 published some results on classifying small Latin squares but for the first few steps in this direction one should actually go at least as far back as ancient Greece and the proof that there are exactly five Platonic solids One of the most remarkable achievements in the early pre computer era is the classification of the Steiner triple systems of order 15 quoted above An onerous task that today no sensible person would attempt by hand calculation Because with the exception of occasional parameters for which combinatorial arguments are effective often to prove nonexistence or uniqueness classification in general is about algorithms and computation

*Algebraic Coding* Gerard Cohen, 1994-04-28 This book discusses the changes in the regional infrastructure within the European automobile industry It is based on the increased competition between the European automobile industry and its suppliers which has several causes the intensified activities of Japanese competitors in Europe leading to faster adaptation to new production concepts in European companies lean production concentration of suppliers in connection with these new concepts new opportunities and competition as a result of the home market and the opening of Eastern Europe

Applied Algebra, Algebraic Algorithms and Error-Correcting Codes Gérard Cohen, Marc Giusti, Teo Mora, 1995 This book constitutes the proceedings of the 11th International Conference on Applied Algebra Algebraic Algorithms and Error Correcting Codes AAEECC 11 held in Paris France in July 1995 The volume presents five invited papers and 32 full revised research papers selected from a total of 68 submissions it is focussed on research directed to the exploitation of algebraic techniques and methodologies for the application in coding and computer algebra Among the topics covered are coding cryptology communication factorization of polynomials Gröbner bases computer algebra algebraic algorithms symbolic computation algebraic manipulation
