Arithmetic, Geometry, and Coding Theory R. Pellikaan,M. Perret,S.G. Vladut,2011-07-20 The series is aimed specifically at publishing peer reviewed reviews and contributions presented at workshops and conferences Each volume is associated with a particular conference symposium or workshop These events cover various topics within pure and applied mathematics and provide up to date coverage of new developments methods and applications      **Algebraic Coding Theory (Revised Edition)** Elwyn R Berlekamp,2015-03-26 This is the revised edition of Berlekamp s famous book Algebraic Coding Theory originally published in 1968 wherein he introduced several algorithms which have subsequently dominated engineering practice in this field One of these is an algorithm for decoding Reed Solomon and Bose Chaudhuri Hocquenghem codes that subsequently became known as the Berlekamp Massey Algorithm Another is the Berlekamp algorithm for factoring polynomials over finite fields whose later extensions and embellishments became widely used in symbolic manipulation systems Other novel algorithms improved the basic methods for doing various arithmetic operations in finite fields of characteristic two Other major research contributions in this book included a new class of Lee metric codes and precise asymptotic results on the number of information symbols in long binary BCH codes Selected chapters of the book became a standard graduate textbook Both practicing engineers and scholars will find this book to be of great value      *Biographical*

Gray,2013-03-14 This book is devoted to the theory of probabilistic information measures and their application to coding theorems for information sources and noisy channels The eventual goal is a general development of Shannon s mathematical theory of communication but much of the space is devoted to the tools and methods required to prove the Shannon coding theorems These tools form an area common to ergodic theory and information theory and comprise several quantitative notions of the information in random variables random processes and dynamical systems Examples are entropy mutual information conditional entropy conditional information and discrimination or relative entropy along with the limiting

normalized versions of these quantities such as entropy rate and information rate Much of the book is concerned with their properties especially the long term asymptotic behavior of sample information and expected information This is the only up to date treatment of traditional information theory emphasizing ergodic theory *Handbook of Coding Theory* Vera Pless,William Cary Huffman,Richard A.
