Advanced Remote Sensing for Urban and Landscape Ecology Sk. Mustak, Dharmaveer

Singh, Prashant Kumar Srivastava, 2023-06-23 This book introduces the use of various remote sensing data such as microwave hyperspectral and very high resolution VHR satellite imagery mapping techniques including pixel and object based machine learning and geostatistical modelling techniques including cellular automata entropy and land fragmentation Remote sensing plays a vital role in solving urban and environmental challenges at the landscape level Globally more than half of the urban population is facing severe environmental and social challenges especially those relating to climate change agricultural land encroachment green infrastructure and environmental degradation mobility due to rapid rural urban transformation and anthropogenic interventions Mapping and quantification of such threats at the landscape level are challenging for experts using traditional techniques however remote sensing technology provides diverse spatial data at a varying scale volume and accessibility for mapping and modelling and it also analyses challenges at urban and landscape levels Together they address challenges at urban and landscape levels to support the Sustainable Development Goals SDGs

Applications of STEM (Science, Technology, Engineering and Mathematics) Tools in Microbiology of

Infectious Diseases Julio Alvarez, Andres Perez, 2017-06-02 Epidemiology is a discipline intended to systematically investigate and ideally quantify disease dynamics in populations Perez 2015 Epidemiological assessments may be divided into four large areas namely a identification and characterization of a pathogen b development of systems for detection of cases c descriptive epidemiology and quantification of disease patterns and d advanced analytical methods to design intervention strategies Briefly there is an initial need for understanding the pathogeny of a disease and condition which may also include

experimental studies and development of new models of infection and proliferation under different conditions Subsequently such knowledge may be applied to support the identification of cases which typically includes the design evaluation and validation of diagnostic tests Disease may then be quantified in a population leading to the identification of patterns and application of molecular characterization techniques to understand disease spread and ultimately to identify factors preventing or promoting disease Finally those factors may be incorporated into advanced quantitative methods and epidemiological models which are used to design and evaluate strategies aimed at preventing controlling or eliminating disease in the population Recent years have seen a dramatic increase in the application of science technology engineering and mathematical STEM tools and approaches intended to enhance such analytical epidemiology process with the ultimate goal of supporting disease prevention control and eradication This eBook comprises a series of research articles that through current state of the art scientific knowledge on the application of STEM tools to the microbiology of infectious diseases demonstrate their usefulness at the various components of an integral epidemiological approach divided into the four large components of a experimental studies b novel diagnostic techniques c epidemiological characterization and d population modeling and intervention *Women in conservation and restoration ecology 2022* Diana Hamilton, Myriam A.
