Wilson,David H Jonassen,1990-05-21 This volume presents a process for developing expert systems As the field of instructional technology matures it is becoming clear that technological process not technological devices is the single most important factor in designing effective instruction Computers as devices are helpful but their primary advantage may be the discipline placed on thinking and design processes by using them The process used when examining a problem determines the quality of information entered into a program and the ultimate effectiveness of the solution The process in this volume is intended for small scale expert system solutions that contribute to the solution of instructional problems Hardware independent the volume focuses on narrowly defined examples intended for small personal computer systems Particular attention is paid to problems associated with education and training Building Expert Systems in Training and Education has one primary function to help instructional designers derive the components of a problem and enter it into an expert system shell It is totally process oriented and focuses on the front end knowledge engineering process It provides a repertoire of practical tools and processes that can be used to select define and structure problems Three types of examples are used to illustrate three ways to use expert systems for instructional support for instructional decision making and for an instructional job aid Each chapter is followed by a list of learning activities to facilitate practice and consolidation When appropriate answers or examples to the learning activities is given This is a practical guide for instructional technology educators and students and business and industrial training professionals

C. Daugherity,R. N. Coulson,1993 Abstract Usability and human factors are important aspects in determining the success of a large expert system A perfectly functional system is not necessarily a usable system Often end users are neglected in the development and deployment of a system Lacking end user involvement makes a functional practical and usable expert system difficult to build To address this problem we have developed a six step usability methodology for the development of large scale expert systems This paper shows how this methodology helps in the development of a widely deployed integrated large expert system ISPBEX Integrated Southern Pine Beetle Expert System   A Software Engineering Approach to Building Reusable Expert Systems Wei Dai,Commonwealth Scientific and Industrial Research Organization (Australia). Division of Building, Construction and Engineering,1995 The paper discusses the identification and development of common expert system building blocks using conventional software engineering techniques It presents a specification methodology in defining expert system components granularity and transparency to allow these components to be reused in different expert system development projects The paper focuses on the practical advantages of such an approach rather than its theoretical aspect Several examples have been chosen to provide some insights into how software engineering techniques are used in producing reusable expert system templates and components It is anticipated cost effective expert system products can be generated under such an approach within most of conventional software development environments

Building Expert Systems Book Review: Unveiling the Magic of Language

In an electronic digital era where connections and knowledge reign supreme, the enchanting power of language has be apparent than ever. Its capability to stir emotions, provoke thought, and instigate transformation is truly remarkable.
