SEEDS brings together global experts to focus on a sustainability agenda and the positive and detrimental changes that are taking place. Papers presented at the conference come from across a broad spectrum of the Sustainable Development Goals (SDGs) and bring forward practices to tackle the climate emergency and evaluate their impact. It addresses technical issues measuring, monitoring, and assessing change, emphasizing the environment, infrastructure, and buildings, how they exist in relative isolation, and the possibilities for sustainable integration. The SEEDS Conference addresses the interdependence of people and the built and natural environments and recognizes the interdisciplinary and international themes necessary to assemble the knowledge required for positive change.

**Architected Materials in Nature and Engineering** Yuri Estrin, Yves Bréchet, John Dunlop, Peter Fratzl, 2019-03-27. This book deals with a group of architected materials. These are hybrid materials in which the constituents, even strongly dissimilar ones, are combined in a given topology and geometry to provide otherwise conflicting properties. The hybridization presented in the book occurs at various levels, from the molecular to the macroscopic, say sub-centimeter ones. This monograph represents a collection of programmatic chapters defining archimats and summarizing the results obtained by using the geometry-inspired materials design. The area of architected or geometry-inspired materials has reached a certain level of maturity and visibility for a comprehensive presentation in book form. It is written by a group of authors who are active researchers working on various aspects of architected materials. Through its 14 chapters, the book provides definitions and descriptions of the archetypes of architected materials and addresses the various techniques in which they can be designed, optimized, and manufactured. It covers a broad realm of archimats, from the ones occurring in nature to those that have been engineered, and discusses a range of their possible applications. The book provides inspiring and scientifically profound yet entertaining reading for the materials science community and beyond.

*Glass & Interactive Building Envelopes* Michel Crisinel, 2007. The concept of tomorrow's towns and cities will be based on new social, economic, and technological ideals focused on improving the quality of life. To attain this objective, architects and engineers of today must improve the quality of buildings and establish new principles of building conception. The quality of interior space and the impact of a building on its surroundings depends strongly on the physical interface that separates the outer environment from the inner building space. The conception and realization of this interface, the envelope, are therefore of prime importance.
