Cell Cycle In Development And Differentiation:

The Cell Cycle in Development and Differentiation British Society for Developmental Biology, 1973

Cell Cycle in Development Jacek Z. Kubiak, 2011-06-01 This book focuses on the intersection between cell cycle regulation and embryo development. Specific modifications of the canonical cell cycle occur throughout the whole period of development and are adapted to fulfil functions coded by the developmental program. Deciphering these adaptations is essential to comprehending how living organisms develop. The aim of this book is to review the best known modifications and adaptations of the cell cycle during development. The first chapters cover the general problems of how the cell cycle evolves while consecutive chapters guide readers through the plethora of such phenomena. The book closes with a description of specific changes in the cell cycle of neurons in the senescent human brain. Taken together the chapters present a panorama of species from worms to humans and of developmental stages from unfertilized oocyte to aged adult.

The Cell Cycle and Development Gregory R. Bock, Gail Cardew, Jamie A. Goode, 2001-06-29 This book brings together scientists working at the interface between the cell cycle, cell growth and development in a variety of model systems and research paradigms. The focus is on understanding how such diverse developmental inputs can modulate cell cycle regulation and reciprocally how a common way of regulating cell cycle progression can participate in different developmental strategies.

Developmental Aspects of the Cell Cycle Ivan Cameron, 2012-12-02 *Developmental Aspects of the Cell Cycle* discusses the molecular, organelle, cellular and organismal levels of cell cycle, cell proliferation and cell differentiation. It addresses the possible antagonism between the ability of cells to proliferate and to differentiate. After brief historical, theoretical and methodological background information for each cell system, this book concentrates on the mechanisms involved in the regulation of cell proliferation and differentiation. The book presents systems in which mass cultures of cells can be induced to undergo a synchronous transition from one cell state to another, enabling the amplification of cellular and biochemical events to be analyzed with the available morphological and biochemical techniques. Some chapters explain the possibility of cell state production by a microenvironment that occurs at the organismal level in which a series of mitotic and growth steps causes cell proliferation. The concluding chapters discuss cell proliferation and differentiation in specific cell systems such as embryonic chick and male germ cell. This book will appeal to investigators in many disciplines, teachers and life sciences students, particularly to molecular, cellular and developmental biologists.

Asymmetric Cell Division in Development, Differentiation and Cancer Jean-Pierre Tassin, Jacek Z. Kubiak, 2017-04-12 This book provides readers with an overview of the frequent occurrence of asymmetric cell division. Employing a broad range of examples, it highlights how this mode of cell division constitutes the basis of multicellular organism development and how its misregulation can lead to cancer. To underline such developmental correlations, readers will, for example, gain insights into stem cell fate and tumor growth. In turn, subsequent chapters include

descriptions of asymmetric cell division from unicellular organisms to humans in both physiological and pathological conditions. The book also illustrates the importance of this process for evolution and our need to understand the background mechanisms offering a valuable guide not only for students in the field of developmental biology but also for experienced researchers from neighboring fields.

Cell Cycle and Cell Differentiation J. Reinert, H. Holtzer, 2013-06-29 It is instructive to compare the response of biologists to the two themes that comprise the title of this volume. The concept of the cell cycle in contrast to cell division is a relatively recent one. Nevertheless, biologists of all persuasions appreciate and readily agree on the central problems in this area. Issues ranging from mechanisms that initiate and integrate the synthesis of chromosomal proteins and DNA during S phase of mitosis to the manner in which assembly of microtubules and their interactions lead to the segregation of metaphase chromosomes are readily followed by botanists and zoologists as well as by cell and molecular biologists. These problems are crisp and well defined. The current state of cell differentiation stands in sharp contrast. This one of the oldest problems in experimental biology almost defies definition today. The difficulties arise not only from a lack of pertinent information on the regulatory mechanisms but also from conflicting basic concepts in this field. One of the ways in which this situation might be improved would be to find a broader experimental basis including a better understanding of the relationship between the cell cycle and cell differentiation.

Frontiers in Stem Cell and Regenerative Medicine Research: Volume 9 Atta-ur-Rahman, Shazia Anjum, 2020-05-05 Stem cell and regenerative medicine research is an important area of clinical research which promises to change the face of medicine as it will be practiced in the years to come. Challenges in the 21st century to combat diseases such as cancer, Alzheimer's disease, and retinal disorders among others may well be addressed employing stem cell therapies and tissue regeneration techniques. *Frontiers in Stem Cell and Regenerative Medicine Research* is essential reading for researchers seeking updates in stem cell therapeutics and regenerative medicine. This volume includes current literature on a variety of topics: the utility of exogenous and endogenous neural stem cells in spinal cord injury; somatic cells for human induced pluripotent stem cells (iPSCs); reactive oxygen species (ROS) mediated cellular signaling for stem cell differentiation; the therapeutic potential of microRNAs in cardiac diseases; stem cell therapy for the treatment of malaria.
