Cellular Manufacturing:

Handbook of Cellular Manufacturing Systems Shahruckh A. Irani,1999-04-15 Cellular manufacturing CM is the grouping of similar products for manufacture in discrete multi machine cells It has been proven to yield faster production cycles lower in process inventory levels and enhanced product quality Pioneered on a large scale by Russian British and German manufacturers interest in CM methods has grown steadily over the past decade However there continues to be a dearth of practical guides for industrial engineers and production managers interested in implementing CM techniques in their plants Bringing together contributions by an international team of CM experts the Handbook of Cellular Manufacturing Systems bridges this gap in the engineering literature

Cellular Manufacturing John X. Wang,2015-01-14 In today s business world competitiveness defines the industrial leading edge Organizations and businesses of all sizes are adopting Lean manufacturing practices to increase efficiency and address worries about their bottom lines In a detailed review of this staple of Lean manufacturing Cellular Manufacturing Mitigating Risk and Uncertainty outlines how cellular manufacturing can do just that It demonstrates how this approach can help you and your teams build a variety of products with as little waste as possible The book begins by presenting a survey of the current state of existing methods that can best be used in the handling of the bottleneck machines and parts problem which results from the cellular manufacturing system design It then explores how decision making under risk is used to help the designer select the best cell arrangement in case of probabilistic production volume and maximize the profit imposed by resource capacity constraints The author then presents a method for the system design of a manufacturing cell that aims for profit maximization over a certain period of time He also discusses robust design illustrated with a real application Put simply cellular manufacturing integrates machinery and a small team of staff directed by a team leader so all the work on a product or part can be accomplished in the same cell eliminating resources that do not add value to the product A concise yet unique reference this book incorporates decision making under risk into cellular manufacturing The text makes the link that ties cellular manufacturing to the bottom line It helps you recognize savings opportunities from elimination of downtime between operations decreased material handling costs decreased work in progress inventory and associated costs reduced opportunity for handling errors decreased downtime spent waiting for supplies or materials and reduced losses from defective or obsolete products

CELLULAR MANUFACTURING SYSTEMS : AN INTEGRATED APPROACH PARASHAR, B.S. Cellular Manufacturing Systems N. Singh,D. Rajamani,2012-12-06 Batch manufacturing is a dominant manufacturing activity in the world generating a great deal of industrial output In the coming years we are going to witness an era of mass customization of products The major problems in batch manufacturing are a high level of product variety and small manufacturing lot sizes The product variations present design engineers with the problem of designing many different parts The decisions made in the design stage significantly affect manufacturing cost quality and delivery lead times The impacts of these product variations in manufacturing are high investment in equipment high tooling costs complex scheduling and loading lengthy setup time and costs excessive scrap and high quality control costs However to compete in a global market it is essential to improve the productivity in small batch manufacturing industries For this purpose some innovative methods are needed to reduce product cost lead time and enhance product quality to help increase market share and profitability What is also needed is a higher level of integration of the design and manufacturing activities in a company

Group technology provides such a link between design and manufacturing The adoption of group technology concepts which allow for small batch production to gain economic advantages similar to mass production while retaining the flexibility of job shop methods will help address some of the problems

Planning, Design, and Analysis of Cellular Manufacturing Systems A.K. Kamrani,H.R. Parsaei,D.H. Liles,1995-04-11 Leading researchers in the field of cellular manufacturing systems from academia and industry have contributed to this volume The book aims to report the latest developments and address the central issues in the design and implementation of cellular manufacturing systems Cellular Manufacturing CM is one of the major concepts used in the design of flexible manufacturing systems CM also known as group production or family programming can be described as a manufacturing technique that produces families of parts within a single line or cell of machines The first part of the book describes various techniques for design and modeling of cellular manufacturing systems The second part is concerned with performance measure and analysis followed by a section which presents the applications of artificial intelligence and computer tools in cellular manufacturing systems

Reorganizing the Factory Nancy Hyer,Urban Wemmerlov,2001-10-22 Winner of the 2003 Shingo Prize Reorganizing work processes into cells has helped many organizations streamline operations shorten lead times increase quality and lower costs Cellular manufacturing is a powerful concept that is simple to understand however its ultimate success depends on deciding where cells fit into your organization and then applying the know how to design implement and operate them Reorganizing the Factory presents a thoroughly researched and comprehensive life cycle approach to competing through cellular work organizations It takes you from the basic cell concept and its benefits through the process of justifying designing implementing operating and improving this new type of work organization in offices and on the factory floor The book discusses many important technical dimensions such as factory analysis cell design planning and control systems and principles for lead time and inventory reduction However unique to the literature it also covers in depth the numerous managerial issues that accompany organizing work into cells In most implementations performance measurement compensation education and training employee involvement and change management are critically important These issues are often overlooked in the planning process yet they can occupy more of the implementation time than do the technical aspects of cells Includes Why do cells improve lead time quality and cost Planning for cell implementation Justifying the move to cells strategically and economically Designing efficient manufacturing and office cells Selecting and training cell employees Compensation system for cell employees Performance and cost measurement Planning and control of materials and capacity Managing the change to cells Problems in designing implementing and operating cells Improving and adapting

existing cells Structured frameworks and checklists to help analysis and decision making Numerous examples of cells in various industries

Group Technology and Cellular Manufacturing Nallan C. Suresh, John M. Kay, 2012-12-06 Group Technology and Cellular Manufacturing GT CM have been widely researched areas in the past 15 years and much progress has been made in all branches of GT CM Resulting from this research activity has been a proliferation of techniques for part machine grouping engineering data bases expert system based design methods for identifying part families new analytical and simulation tools for evaluating performance of cells new types of cell incorporating robotics and flexible automation team based approaches for organizing the work force and much more however the field lacks a careful compilation of this research and its outcomes The editors of this book have commissioned leading researchers and implementers to prepare specific treatments of topics for their special areas of expertise in this broad based philosophy of manufacturing The editors have sought to be global both in coverage of topic matters and contributors Group Technology and Cellular Manufacturing addresses the needs and interests of three groups of individuals in the manufacturing field academic researchers industry practitioners and students

- 1 The book provides an up to date perspective incorporating the advances made in GT CM during the past 15 years As a natural extension to this research it synthesizes the latest industry practices and outcomes to guide research to greater real world relevance
- 2 The book makes clear the foundations of GT CM from the core elements of new developments which are aimed at reducing developmental and manufacturing lead times costs and at improving business quality and performance
- 3 Finally the book can be used as a textbook for graduate students in engineering and management for studying the field of Group Technology and Cellular Manufacturing

Implementing Cellular Manufacturing Methodologies to Improve the Performance of a Manufacturing Operation Manuel Roza Correa, Sloan School of Management, Massachusetts Institute of Technology. Engineering Systems Division, Leaders for Global Operations Program, 2011 Many traditional high mix low volume manufacturing facilities utilize process villages whereby similar operations are grouped together in an effort to gain efficiencies While process villages can improve certain metrics and increase capacity utilization many wastes can be created that outweigh most benefits In many cases process villages operate with large batch sizes which result in longer lead times and increased inventories A different approach for an appropriate range of product mixes and volumes is to form production cells for common products that group different processes together to form complete value streams The manufacturing cells focus on completely finishing products before handing them off and result in reduced lead times and inventories This thesis presents a methodology for implementing such production cells in a manufacturing environment The author spent six months at a leading aerospace company implementing cellular manufacturing principles in designing several production cells for a transmission component manufacturing department as part of a lean transformation effort The cell design methodology implemented consisted of several key processes such as process flow design material handling design workplace organization and staffing The process flow design consisted of

activities such as grouping products into families designing value streams and performing capacity analysis Material handling design developed solutions for how products physically flow through the cell and managing work in process Workplace organization focused on utilizing visual factory and 5S principles to ensure strong communication and information flow as well as first class equipment organization and housekeeping Finally workload analyses were performed to appropriately staff the cells to minimize costs and ensure efficient operations Ultimately the goal of any transformation effort is to reduce waste and add value which would not be possible if the culture of the organization did not support the physical and operational design changes Hence the final and arguably most important piece of the transformation which the author participated in was engaging the workforce to drive the culture change
