## Science Reading Comprehension Article - Grade 5 - 7

### Bridges

Bridges are structures that let us cross gulches, valleys, rivers, streams, and other obstacles. Bridges have been used for thousands of years in many different ways and across many cultures. In the United States, we have many different types of bridges and spans.

#### History of Bridges

The earliest bridges were made using simple materials like logs, stones, and animal skins. As people started to travel more often, they needed bridges that could carry more weight. The first stone bridges were made of large blocks of stone. These bridges could support a lot of weight and were very durable. They were also very beautiful and often had arches or other decorative features.

Many bridges in America were built using iron and steel. These bridges were stronger and could support more weight than stone bridges. They were also easier to build and repair. The first iron bridge was built in 1779 in Pennsylvania. It was a simple beam bridge made of iron.

Some bridges are built using concrete. Concrete is a strong material that can support a lot of weight. It is also very durable and can last for many years. The first concrete bridge was built in 1825 in England. It was a simple beam bridge made of concrete.

In the 1900s, steel became the most common material for bridges. Steel is a strong material that can support a lot of weight. It is also very durable and can last for many years. The first steel bridge was built in 1853 in England. It was a simple beam bridge made of steel.

#### How Bridges Work

A bridge is a structure that supports a load across an obstacle. The load is the weight of the bridge and anything on it. The obstacle is the gap that the bridge crosses. The bridge must be strong enough to support the load without falling or breaking.

#### The Four Main Types of Bridges

1. **Beam**: A simple bridge that is supported by two or more piers.
2. **Truss**: A bridge that is supported by a network of triangles.
3. **Suspension**: A bridge that is supported by cables that are attached to towers.
4. **Arch**: A bridge that is supported by a single arch.
