Definitions

Those aspects of and changes in public administration necessary to carry out policies, projects, and programs that will improve social and economic conditions, and the study of such administration.

The bureaucratic process that facilitates or stimulates the achievement of socioeconomic progress through utilization of the talents and expertise of the bureaucrats. It involves the mobilization of bureaucratic elite skills for speeding up the development process.

Introduction

Development administration is one of the many perspectives from which scholars understand the underdevelopment of many developing countries, particularly in Africa and other parts of Asia, and what can be done to change it. Development administration may be even more relevant today than when it first emerged in the aftermath of the Second World War; globalization produced a one-size-fits-all approach through concepts like the New Public Management (NPM) and reinventing government.

Currently these global ideas have found resonances in concepts such as governance, collaborative governance, the new public governance, and public networks, among others. Unfortunately, while these ideas gain traction implementing them continues to be problematic in developing countries, which want to develop their public bureaucracy as the condition for better overall development. Bureaucracies in most developing countries are less able than in the developed world, making it very difficult for them to undertake the kind of development common elsewhere. It is thus important to revisit the idea of development administration to see how it can fit into the modern or even the postmodern developmental ethos, and how it can be used to enhance development in developing countries. In other words: Is development administration relevant today?
