**Practical Guide to Garden Plants ...** John Weathers,1901 Garden Plants Taxonomy Bijan Dehgan,2023-04-05  
Horticulture has remained far behind in understanding of botanical principles Recent phylogenetic DNA based  
reorganization of higher plants has revolutionized taxonomic treatments of all biological entities even when morphology does  
not completely agree with their organization This book is an example of applying principals of botanical phylogenetic  
taxonomy to assemble genera species and cultivars of 200 vascular plant families of ferns gymnosperms and angiosperms  
that are cultivated for enhancement of human living space homes gardens and parks The emphases are on cultivated species  
but examples of some plants are often shown in the wild and in landscapes In providing descriptions it is assumed that  
students and other interested individuals have no background in general botany plant characteristics or nomenclature  
Fundamental features of all plant groups discussed are fully illustrated by original watercolor drawings or photographs  
Discussion of the families is grounded on recent botanical phylogenetic treatments which is based on common ancestry  
monophyly Of course phylogenetic taxonomy is not a new concept and was originally based on morphological characteristics  
it is the DNA based phylogeny that has revolutionized modern biological classifications In practical terms this book  
represents the horticultural treatment that corresponds to phylogenetic based botanical taxonomy to which is added  
cultigens and cultivated genera and species Hence the harmony between horticultural and botanical taxonomy This book  
covers phylogenetic based taxonomy of Angiosperms Eudicots A companion volume covers Ferns Gymnosperms and  
Angiosperms Monocots Library of Congress Catalogs Library of Congress,1980 *National Union Catalog* ,1980
