Artificial Intelligence And Dynamic Systems For Geophysical Applications:

Artificial Intelligence and Dynamic Systems for Geophysical Applications Alexej Gvishiani, Jacques O. Dubois, 2013-04-17

The book presents new clustering schemes dynamical systems and pattern recognition algorithms in geophysical geodynamical and natural hazard applications The original mathematical technique is based on both classical and fuzzy sets models Geophysical and natural hazard applications are mostly original However the artificial intelligence technique described in the book can be applied far beyond the limits of Earth science applications The book is intended for research scientists tutors graduate students scientists in geophysics and engineers

Heat-Mass Transfer and Geodynamics of the Lithosphere Valentina Svalova, 2021-04-09 This volume is devoted to investigation of all aspects of heat mass transfer processes at different scales and from various origins as well as the formation and evolution of geological structures These phenomena are linked to geophysical properties of rocks geothermal resources geothermics fluid dynamics stress state of the lithosphere deep geodynamics plate tectonics and seismicity among others The book consists of two main parts The first concerns heat mass transfer associated with natural and technogenic processes in the upper lithosphere The second deals with geodynamics and seismicity The collection of over 25 chapter from leading investigators in Russia is thus an important contribution to research on the lithosphere in connection with formation and evolution of geological structures heat and mass transfer processes in the lithosphere and their connection with deep Earth geodynamics Collects a range of research methodologies including application of modelling seismic tomography geological field works geological geophysical methods and in situ measurements through instrumentation Explains how a wide range of geological and geophysical phenomena arising in the Earth s lithosphere can be investigated under the umbrella of a common approach to heat mass transfer processes Includes the latest research by more than 60 leading scientists from Russia

Observations, Modeling and Systems Analysis in Geomagnetic Data Interpretation Alexei Gvishiani, Anatoly Soloviev, 2020-09-17 Geomagnetic field penetrates through all shells of the solid Earth hydrosphere and atmosphere spreading into space The Earth Magnetic Field plays a key role in major natural processes Geomagnetic field variations in time and space provide important information about the state of the solid Earth as well as the solar terrestrial relationships and space weather conditions The monograph presents a set of fundamental and at the same time urgent scientific problems of modern geomagnetic studies as well as describes the results of the authors developments The new technique introduced in the book can be applied far beyond the limits of Earth sciences Requirements to corresponding data models are formulated The conducted experimental investigations are combined with development and implementation of new methods of mathematical modeling artificial intelligence systems analysis and data science to solve the fundamental problems of geomagnetism At that formalism of Big Data and its application to Earth Sciences is presented as essential part of systems analysis The book is intended for research scientists tutors students postgraduate students and engineers working in geomagnetism and Earth sciences in general as

well as in other relevant scientific disciplines

Submarine Geomorphology Aaron Micallef, Sebastian Krastel, Alessandra Savini, 2017-07-18 This book on the current state of knowledge of submarine geomorphology aims to achieve the goals of the Submarine Geomorphology working group set up in 2013 by establishing submarine geomorphology as a field of research disseminating its concepts and techniques among earth scientists and professionals and encouraging students to develop their skills and knowledge in this field Editors have invited 30 experts from around the world to contribute chapters to this book which is divided into 4 sections i Introduction history ii Data methods ii Submarine landforms processes and iv Conclusions future directions Each chapter provides a review of a topic establishes the state of the art identifies the key research questions that need to be addressed and delineates a strategy on how to achieve this Submarine geomorphology is a priority for many research institutions government authorities and industries globally The book is useful for undergraduate and graduate students and professionals with limited training in this field
