Artificial Neural Networks For Civil Engineers Fundamentals And Applications:

Artificial Neural Networks for Civil Engineers Nabil Kartam, Ian Flood, James H. Garrett, Girish Agrawal, 1997-01-01 This monograph provides researchers with an understanding of the potential of artificial neural networks for solving civil engineering related problems and guidance on how to develop successful implementations for a broad range of problems Fundamental issues in the selection development and use of neural networks as well as example applications to each of the various disciplines in civil engineering are presented An introduction to neural networks is provided along with a classification of the various forms of neural networking systems available architectures modes of operation and methods of development

Artificial Neural Networks for Civil Engineers Ian Flood, Nabil Kartam, American Society of Civil Engineers. Expert Systems and Artificial Intelligence Committee, 1998-01-01 Artificial neural networks represent a broad and rapidly developing technology featuring new systems and novel ways of applying established systems This monograph illustrates advanced methods and recent developments in applying artificial neural network concepts in civil engineering

Artificial Neural Networks for Civil Engineers Ian Flood, Nabil Kartam, 1998-01-01 Sponsored by the Committee on Expert Systems and Artificial Intelligence of the Technical Council on Computer Practices of ASCE This report illustrates advanced methods and new developments in the application of artificial neural networks to solve problems in civil engineering Topics include evaluating new construction technologies using multi layered artificial neural network architecture to overcome problems with conventional traffic signal control systems increasing the computational efficiency of an optimization model predicting carbonation depth in concrete structures detecting defects in concrete piles analyzing pavement systems using neural network hybrids to select the most appropriate bidders for a construction project and predicting the Energy Performance Index of residential buildings Many of the ideas and techniques discussed in this book cross across disciplinary boundaries and therefore should be of interest to all civil engineers

Expert Systems for Civil Engineers Iris D. Tommelein, 1997-01-01 This monograph on integrated computer systems is one in a series of monographs published by the Expert Systems on Artificial Intelligence Committee of the ASCE Technical Council on Computer Practices The purpose of the monograph series is to address issues in the use of expert system technology in civil engineering problem solving Many of the publications and tools available to implement expert systems are generalized environments The application of these environments is best achieved with an understanding of how others have succeeded or failed in using them to solve problems in the civil engineering domain EM Expert Systems for Civil Engineers Integration Issues broadens the scope of the monograph series from a focus on expert systems to a more general use of Artificial Intelligence AI techniques The scope is also broadened by considering integration of computer programs more generally rather than only on combining expert systems with other packages The reason for expanding the scope of the series is to consider the role of AI in civil engineering computer environments rather than being limited to the implementation of expert systems This follows a general trend in

research and practice to find the right tool for the problem being addressed rather than to a priori assume an expert system approach This report specifically describes the technical and pragmatic issues in developing integrated or distributed computer systems in which AI techniques are used and how these issues were resolved in civil engineering research and practice
