

Artificial Intelligence and Libraries Bibliography

Charles W. Bailey, Jr.

Houston: Digital Scholarship, 2023

The *Artificial Intelligence and Libraries Bibliography* includes over 125 selected English-language articles and books that are useful in understanding how libraries are exploring and adopting modern artificial intelligence (AI) technologies. It covers works from January 2018 through August 2023. The bibliography is available as a [website](#) and a [website PDF with live links](#).

AI is a complex topic, but these recent overviews of general AI systems¹ and generative AI systems² are helpful in understanding it (both papers are open access).

Libraries have been exploring AI technology for a long time. In particular, there was an active period of experimentation from the mid-1980s through the mid-1990s that primarily focused on the use of expert systems.³⁻¹⁴ Many projects used expert system shells, which simplified development; however, some projects, such as the University of Houston's Intelligent Reference Information System Project, also used AI languages, such as Prolog.¹⁵ This period produced a significant number of library-related AI papers.

Subsequently, library interest in AI diminished until around 2018, when research activity increased.

The public release of generative AI systems in late 2022, such as ChatGPT, sparked a strong upsurge of interest in them and a rush to utilize their capabilities. Since these systems are relatively easy to use, this development may result in a significant new wave of library-oriented AI activity.

This bibliography does not cover conference proceedings, digital media works (such as MP3 files), e-mail messages, interviews, letters to the editor, presentation slides or transcripts, technical reports, unpublished e-prints, and/or weblog postings.

The bibliography has links to included works. Where possible, it uses Digital Object Identifier System (DOI) URLs. All links are subject to change. Should a link be dead, try entering it in the Internet Archive Wayback Machine.

References in this bibliography are created from information in the publisher's *online record* for the work. Some publishers may use nontraditional citation elements and patterns. Key information may be missing from the publisher's online record (e.g. volume, number, and pages). In some cases, there is online publication date information instead. If there is a citation format tool on the work's online record, the information from that tool is used.
