Luger,1994-05-25 The interdisciplinary field of cognitive science brings together elements of cognitive psychology mathematics perception linguistics and artificial intelligence Given this breadth textbooks have had difficulty providing balanced coverage most resort to disjointed edited treatises that prove difficult to use Cognitive Science provides a unified and comprehensive look at the field from foundations to applications Luger explores the logical and philosophical bases of cognitive science with multiple models of intelligence including neural networks and connectionism Practical programming examples are included along with an introduction to PROLOG   **Foundational Issues in Artificial Intelligence and Cognitive Science** Mark H. Bickhard,L. Terveen,1995-03-07 The book focuses on a conceptual flaw in contemporary artificial intelligence and cognitive science Many people have discovered diverse manifestations and facets of this flaw but the central conceptual impasse is at best only partially perceived Its consequences nevertheless visit themselves asdistortions and failures of multiple research projects and make impossible the ultimate aspirations of the fields The impasse concerns a presupposition concerning the nature of representation that all representation has the nature of encodings encodingism Encodings certainly exist butencodingism is at root logically incoherent any programmatic research predicted on it is doomed too distortion and ultimate failure The impasse and its consequences and steps away from that impasse are explored in a large number of projects and approaches These include SOAR CYC PDP situated cognition subsumption architecture robotics and the frame problems a general survey of the current research in AI and Cognitive Science emerges Interactivism an alternative model of representation is proposed and examined   **Artificial Intelligence** D. Boden,1989 This collection of Margaret Boden s essays written between 1982 and 1988 focuses on the relevance of artificial intelligence to psychology With her usual clarity and eye for the key role that each discipline plays in the science of the mind Boden ties the essays together in a thorough synoptic overview She outlines the various approaches from Babbage s contributions through the work of Turing and von Neumann to the latest theories of parallel processing and the questions that researchers in AI and psychology must ask to ascertain if there might be a discipline termed computational psychology Many theoretical psychologists today believe that the science of artificial intelligence can include all of the phenomena generated by the human mind This functionalist approach views the mind as a representational system and psychology as the study of the various computational processes whereby mental representations are constructed organized and interpreted Disagreements abound however about how various psychological phenomena can be explained in computational terms there is disagreement too about which AI concepts and which of the computermodeling methodologies will prove most useful from the psychologist s point of view All of these issues are raised and clearly investigated here The
