## **Double Planet Pluto And Charon:**

**THE GREAT SPACE ADVENTURE** Ruben Ygua, 2025-08-20 Galileo Galilei was an astronomer mathematician physicist and philosopher who led the scientific revolution that took place during the Renaissance His discoveries have made him the father of science as well as the father of modern astronomy and physics In 1609 he received a letter from a former student informing him that in Holland they had made a telescope that allows him to see distant objects With only this information Galileo will build its own telescope far superior to the Dutch one it does not deform objects it has more magnification and thanks to a divergent lens it gives the image to the right That same year he presented the instrument to the Senate of Venice in San Marco Square from where he managed to show the island of Murano located 2.5 km from the place This means obtaining a lifetime post at the University of Padua and overcoming his financial difficulties The following year he dedicated it to perfecting his instrument and observing the stars with it With this he discovers that the Moon also has mountains thus finally dismantling the Aristotelian theory that considered it to be a perfect sphere In a short time you will also discover the nature of the Milky Way the constellation of Orion the star clusters and study the rings of Saturn the phases of Venus and sun spots In 1610 he made another important discovery the four satellites of Jupiter that revolve around him Today they are known as Galilean satellites in his honor He thought of Jupiter and its satellites as a model of the solar system By doing this he wanted to show that Aristotle was wrong again and that not all the stars revolved around the Earth This was a severe blow to geo centrism Galileo will publish all his discoveries in this field in *The Messenger of the Stars Sidereus Nuncius* The publication of this book will cause Aristotle supporters to declare war on him since they do not want to see their science questioned Furthermore his method based on observation and experimentation was the opposite of theirs Galileo will refuse even to be compared to them That was the beginning of modern astronomy Historically space exploration began with the launch of the artificial satellite Sputnik by the USSR on October 4 1957 at the Baikonur Cosmodrome USSR rocket launch base in Tyuratam Kazakhstan This event provoked a space race for the conquest of space between the USSR and the United States that culminated in the arrival of man on the Moon This is the story of that great adventure [Wanderers in Space](#)

Kenneth R. Lang, Charles A. Whitney, 1991-03-21 How were the features on the Moon created What is the evidence for past or future life on Mars What might cause the Earth to become as hot and steamy as Venus Why do some say that a colliding asteroid wiped out the dinosaurs 65 million years ago From the earliest of times the human race has pondered upon the nature of the Heavens The moons and planets have changed from mere points of light to fascinating diverse worlds Spacecraft have visited all the planets known to ancient people Human beings have visited the Moon and robot spacecraft have landed on Venus and Mars This book presents the result of this captivating voyage of discovery recording more than two decades of extraordinary accomplishments The voyage starts with the still silent and lifeless Moon Then on to the contrasting world of Mars with its towering volcanoes and deep canyons The exploration continues across asteroid belts and

icy comets to the outer planets where Voyager II revealed cyclonic storms liquid hydrogen and helium rain and the beautiful pink and blue dynamic world of Neptune This book includes numerous photos from spacecraft as well as a few works of modern art They provide the best available metaphors and images of the previously invisible worlds
