Mauche, 2003-12-04 This book is a well edited and comprehensive survey of the current research in the field of low mass accretion powered compact binaries that is binary stars containing a white dwarf neutron star or black hole as the primary star and a Roche lobe filling low mass as the secondary star These stars have reached a stage in their evolution where the transfer of mass from the giant phase onto a dwarf or sub dwarf star demonstrates many different aspects of physics The volume is essentially a complete analysis of these stars combining theory and observation and covering observations of low mass X ray binaries and both magnetic and nonmagnetic cataclysmic variables theories of stellar accretion novae and evolution of compact binaries

Interacting Binaries S.N. Shore, M. Livio, E.P.J. van den Heuvel, 2006-01-27 Observational and Theoretical Issues of Interacting Binaries was the topic of the 22nd Advanced Course of the Swiss Society for Astrophysics and Astronomy It was the first time that binary systems were the center of attention of our course The established concept and organisation of the Advanced Course has been retained three scientists all acknowledged experts in their respective fields were each invited to give nine one hour lectures within the period of a week The Advanced Course took place from April 6 to 11 1992 at Les Diablerets a charming resort in the Swiss alps The high level of the lectures the international background of the 65 participants including many young students and the beauty of the surroundings all contributed to the success of the course The lecture notes of this course the 22nd in our series are also the third to be published by Springer Verlag Well over half of all stars seem to exist in binary systems The study of binary evolution is therefore essential for our understanding of stellar evolution in general The evolution of interacting binaries contains in itself many of the problems met in other fields of modern astrophysics This is very apparent in these lecture notes
