

DRAFT RELEASED FRQ ANSWERS AP CHEMISTRY 2014*(numbers in parentheses and red, represent guesstimate points)***Question 1**

(ii) Potassium and nitrate ions are in solution at the beginning of the reaction and at the end, do not change in any way (i.e., they are spectators), and as such can be omitted from the equation. (1)

(b) In order to ensure that the mass of the precipitate includes only the mass of the solid and none of the water, repeated drying will ensure that all of the water is removed before a final mass is recorded. (1)

(c) Less than. If the lead(II) nitrate were added in the stoichiometric ratio, the conc. of K^{+} and NO_3^{-} would be 1:1, but since the lead(II) nitrate is added in excess, the nitrate ions are present in the larger conc. (1)(d) $1.698 - 1.462 = 0.236$ g of precipitate.

$$\text{Moles of precipitate} = \frac{0.236 \text{ g}}{(207.2 + 126.91 + 126.91 \text{ g mol}^{-1})} \frac{8.416 \text{ g}}{207.2 + 126.91 + 126.91 \text{ g mol}^{-1}} = 5.12 \times 10^{-4} \text{ moles} \quad (1)$$

(e) Mass of I^{-} = (2) (moles of PbI_2) $(126.91 \text{ g mol}^{-1}) = 0.130$ g

$$\text{Mass \% of I}^{-} = \frac{0.130 \text{ g}}{0.425 \text{ g}} \times 100 \frac{0.130}{0.425} (100) = 30.6\% \quad (2)$$

(f) The same since the water plays no part in the mass of I^{-} present (this assumes all of the I^{-} is still precipitated by excess lead (II) nitrate, the tablets are the same and that the precipitate is dried completely as before etc.). (1)(g) (i) Yes, since like lead(II) ions, silver ions also form an insoluble precipitate with iodide ions and since the K_{sp} is sufficiently small to suggest a precipitation will occur. (1)

(ii) No, IF after subtracting the mass of the dried precipitate + filter paper, from the mass of filter paper, yields a mass that has less than three significant figures, or

Yes, IF after subtracting the mass of the dried precipitate + filter paper, from the mass of filter paper, yields a mass that has at least three significant figures. (1)

(No is the expected answer I feel, BUT it does depend on the mass of the tablet IMO).

International Women of Supramolecular Chemistry Jennifer Hiscock, Claudia Caltagirone, Anna McConnell, Cally Jo Elizabeth Haynes, Emily Draper, 2022-03-17 *When Chemistry Meets Biology - Generating Innovative Concepts, Methods and Tools for Scientific Discovery in the Plant Sciences* Erich Kombrink, Markus Kaiser, 2016-08-12

Biologically active small molecules have increasingly been applied in plant biology to dissect and understand biological systems. This is evident from the frequent use of potent and selective inhibitors of enzymes or other biological processes such as transcription translation or protein degradation. In contrast to animal systems which are nurtured from drug research the systematic development of novel bioactive small molecules as research tools for plant systems is a largely underexplored research area. This is surprising since bioactive small molecules bear great potential for generating new powerful tools for dissecting diverse biological processes. In particular when small molecules are integrated into genetic strategies thereby defining chemical genetics they may help to circumvent inherent problems of classical forward genetics. There are now clear examples of important fundamental discoveries originating from plant chemical genetics that demonstrate the power but not yet fully exploited potential of this experimental approach. These include the unraveling of molecular mechanisms and critical steps in hormone signaling activation of defense reactions and dynamic intracellular processes. The intention of this Research Topic of *Frontiers in Plant Physiology* is to summarize the current status of research at the interface between chemistry and biology and to identify future research challenges. The research topic covers diverse aspects of plant chemical biology including the identification of bioactive small molecules through screening processes from chemical libraries and natural sources which rely on robust and quantitative high throughput bioassays the critical evaluation and characterization of the compound's activity selectivity and ultimately the identification of its protein target's and mode of action which is yet the biggest challenge of all. Such well characterized selective chemicals are attractive tools for basic research allowing the functional dissection of plant signaling processes or for applied purposes if designed for protection of crop plants from disease. New methods and data mining tools for assessing the bioactivity profile of compounds exploring the chemical space for structure function relationships and comprehensive chemical fingerprinting metabolomics are also important strategies in plant chemical biology. In addition there is a continuing need for diverse target specific bioprobes that help profiling enzymatic activities or selectively label protein complexes or cellular compartments. To achieve these goals and to add suitable probes and methods to the experimental toolbox plant biologists need to closely cooperate with synthetic chemists. The development of such tailored chemicals that beyond application in basic research can modify traits of crop plants or target specific classes of weeds or pests by collaboration of applied and academic research groups may provide a bright future for plant chemical biology. The current Research Topic covers the breadth of the field by presenting original research articles methods papers reviews perspectives and opinions.

Giardino,2021-08-27 More than fifty years after its initial discovery by Rita Levi Montalcini and Stanley Cohen and the proposal of the neurotrophic theory nerve growth factor NGF has become the prototype of a family of biologically active molecules called neurotrophic factors NTFs This book addresses important advances in NTF research from basic science to clinical medicine It focuses mainly on NGF but also includes individual chapters dealing with the brain derived neurotrophic factor BDNF and ligands of the glial cell line derived neurotrophic factor GDNF family which have attracted increasing interest in the neuroscience community because of their diverse effects in the normal and diseased brain In the first part of the book the authors provide the necessary background for the following chapters and discuss the basic mechanisms and pathways of NGF signal transduction In the following sections they then examine the regenerative activity and neuroprotective capacity of NGF during development and in normal and diseased tissues in adulthood and discuss the role of NGF in Alzheimer s disease and nociception In addition the role of NGF in processing sensory information and its influence on behavior is further discussed The book concludes with an overview of the diagnostic and therapeutic potential of NTF in psychiatric disorders and obesity management as well as a highlight of NGF research in veterinary medicine Many of the authors of this volume participated in the Second International Rita Levi Montalcini Meeting held in Bologna Italy in 2019 The book covers a wide range of important topics in past and current NTF research and will appeal to basic researchers and clinicians alike
