Precision Strike Warfare and International Intervention Mike Aaronson,Wali Aslam, Tom Dyson, Regina Rauxloh,2014-09-15 This book explores whether the new capabilities made possible by precision strike technologies are reshaping approaches to international intervention Since the end of the Cold War US technological superiority has led to a more proactive and some would argue high risk approach to international military intervention New technologies including the capacity to mount precision military strikes from high level bombing campaigns and more recently the selective targeting of individuals from unmanned aerial vehicles UAVs have facilitated air campaigns supported by Special Forces without the commitment of large numbers of troops on the ground Such campaigns include for example NATO s high level aerial bombardment of Milosevic s forces in Kosovo in 1999 and of Gaddafi s in Libya in 2011 and the US operation involving Special Forces against Osama Bin Laden The development of UAVs and electronic data intercept technologies has further expanded the potential scope of interventions for example against Islamic militants in the tribal areas of Pakistan This volume examines three key and interrelated dimensions of these new precision strike capabilities 1 the strategic and foreign policy drivers and consequences 2 the legal and moral implications of the new capabilities and 3 the implications for decision making at the strategic operational and tactical levels This book will be of much interest to students of war and technology air power international intervention security studies and IR

Ecological Film Theory and Psychoanalysis Robert Geal,2021-07-12 This book applies ecolinguistics and psychoanalysis to explore how films fictionalising environmental disasters provide spectacular warnings against the dangers of environmental apocalypse while highlighting that even these apparently environmentally friendly films can still facilitate problematic real world changes in

how people treat the environment Ecological Film Theory and Psychoanalysis argues that these films exploit cinema's inherent Cartesian grammar to construct texts in which not only small groups of protagonist survivors but also vicarious spectators pleurably transcend the fictionalised destruction The ideological nature of the lifeboats on which these survivors escape moreover is accompanied by additional elements that constitute contemporary Cartesian subjectivity such as class and gender binaries restored nuclear families individual as opposed to social responsibilities for disasters and so on The book conducts extensive analyses of these processes before considering alternative forms of filmmaking that might avoid the dangers of this existing form of storytelling The book's new ecosophy and film theory establishes that Cartesian subjectivity is an environmentally destructive symptom that everyday linguistic activities like watching films reinforce This book will be of great interest to students and scholars of film studies literary studies specifically ecocriticism cultural studies ecolinguistics and ecosophy

Insects - Successful Models of Evolution Werner Gnatzy, Jürgen Tautz, 2025-05-16 In the course of evolution insects have developed an almost unbelievable variety of shapes and functional sophistication The design of their exoskeleton is so imaginative and unusual often even bizarre that one can only marvel The fact that insects can find design solutions for any problem no matter how special makes them extremely successful They have thus become crucial links in the complex networks of nature Impressive macro photographs and informative scanning electron optical images provide an insight into the wealth of forms beauty and function of the six legged creatures Fascinating texts accompany the pictures and explain among other things how the great diving beetle uses vertebrate hormones as knock out drops when attacked by fish the pine moth beetle locates distant forest fires the bombardier beetle emits pulsed explosions with its firing apparatus or the blue butterfly caterpillar glimmers ants Insects play a crucial role in the ecosystems of our planet Man made environmental destruction is interfering with these cycles in a sensitive way This endangers the survival of insects with dramatic consequences for us humans as well
