When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. However, if the net force is zero, the object's motion will not change. This means that the object will continue to move in the same direction at the same speed. This is called Newton's first law of motion.</p> <p>Another way that forces can cause an object to change its motion is by changing its acceleration. This means that the object's speed or direction will change. This is called Newton's second law of motion. The equation for this is $F = ma$, where F is the net force, m is the mass of the object, and a is the acceleration. This means that if you know the net force and the mass of an object, you can calculate its acceleration.</p> <p>There are also different ways that forces can cause an object to change its motion. This means that the object's speed or direction will change. This is called Newton's third law of motion. The equation for this is $F_1 = -F_2$, where F_1 is the force on the first object and F_2 is the force on the second object. This means that if you know the force on one object, you can calculate the force on the other object.</p> </div> <p>Read the passage carefully before answering the questions that follow.</p> <ol style="list-style-type: none"> What does Newton's first law of motion state? <ol style="list-style-type: none"> An object at rest will stay at rest.
