When multiple forces act on an object, they combine to determine the net force, which determines whether the object speeds up, slows down, or changes direction. Understanding how forces act together is essential to explaining various observations from a physics world, such as a ball's trajectory or a car's acceleration.</p> <p>Newton's second law of motion states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force increases, the acceleration increases proportionally, but if the mass also increases, the acceleration will decrease. For example, pushing a heavy box with a small force will result in a small acceleration, while pushing a lighter box with the same force will result in a larger acceleration.</p> <p>Newton's third law of motion states that for every action, there is an equal and opposite reaction. This means that when two objects interact, they exert forces on each other that are equal in magnitude but opposite in direction. For example, when a person jumps, they push down on the ground, and the ground pushes up on them, propelling them into the air.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force Which of the following is NOT a type of force? <ol style="list-style-type: none"> Gravitational force Normal force Frictional force Electromagnetic force <div style="text-align: right;">  </div>
