Developmental Psychobiology Elliott M. Blass, 2012-12-06 ELLIOTT M BLASS Fifteen years have passed since the first volume on developmental psychobiology Blass 1986 appeared in this series and 13 since the publication of the second volume Blass 1988 These volumes documented the status of the broad domain of scientific inquiry called developmental psychobiology and were also written with an eye to the future The future has been revolutionary in at least three ways First there was the demise of a descriptive ethology as we had known it to be replaced first by sociobiology and later by its more sophisticated versions based on quantitative predictions of social interactions that reflected relatedness and inclusive fitness Second there was the emergence of cognitive science including cognitive development as an enormously strong and interactive multidisciplinary effort Making the functional brain more accessible made this revolution all the more relevant to our discipline In the laboratory immunocytochemical detection of immediate early genes such as *fos* now allows us to trace neuronal circuits activated during complex behaviors The functional brain of primates especially humans was also made very accessible through neuroimaging with which we can look at and into brains as they solve and attempt to solve particular tasks Those of us who were trained in neurology as graduate students two or three decades ago recognize only the people in white coats and patients in beds or on gurneys when we visit neurological units today The rest is essentially new

Electricity Transmission Pricing and Technology A.F. Kalverboer, A. Gramsbergen, 2001-11-30 The electric utility industry and its stakeholders in the United States appear to be at a critical juncture in time Powerful forces of global proportions are propelling the industry instinctively and in a secular fashion towards restructuring That the industry will change is a fait accompli The nature and timing of the change is still a matter of intense debate however Because of the evolution of the industry into its present day form i e regulated local monopolies in their designated franchise service territories the relative roles and expectations of various institutions would have to change to conform to the new state in the future In either encouraging or allowing this change to happen society is essentially saying that future societal welfare would be better served by the changed structure contemplated What that assumption translates into in more direct terms is that creation of future wealth would be better accomplished through redistribution of wealth today Thoughtful individuals recognize the enormous responsibility placed upon the various entities empowered with jurisdiction over the timing and nature of the structural change They are trying hard to bring analytical rigor to bear on the debate One very critical element of this debate on restructuring is the issue of the treatment of transmission The issue has been variously labeled transmission
