Computing in Anesthesia and Intensive Care Omar

Prakash, 2012-12-06 There is a tendency of an increasing number of signals and derived variables to be incorporated in the monitoring of patients during anesthesia and in intensive care units. The addition of new signals hardly ever leads to the deletion of other signals. This is probably based on a feeling of insecurity. We must realize that each new signal that is being monitored brings along its cost in terms of risk to the patient, investment and time. It is therefore essential to assess the relative contribution of this new signal to the quality of the monitoring process, i.e. given the set of signals already in use, what is the improvement when a new signal is added. Beyond a certain point, the addition of new information leads to new uncertainty and degrades the result. Ream, 1981. In the diagnostic process, it is possible to evaluate result in an objective qualitative way. The changes in the sensitivity and specificity of the diagnosis as a result of the addition or deletion of a certain variable can be calculated on the basis of false negative, false positive, correct negative and false negative scores. Different methods for multiple regression analysis have been implemented on computers. Gelsema, 1981, which can support such decision processes. In monitoring, the situation is much more complex. Many definitions of monitoring have been given, the common denominator is that monitoring is a continuous diagnostic process based upon a semi-continuous flow of information. This makes simple assessment methods useless.

Computers and Computations in the Neurosciences P. Michael Conn, 2013-10-22

Methods in Neurosciences Volume 10 **Computers and Computations in the Neurosciences** discusses the use of computers in the neurosciences. The book deals with data collection, analysis and modeling, with emphasis on the use of computers. Section I involves data collection using a personal microcomputer system. One paper presents a tutorial on using a PC-based motor control composed of an electronic circuit to adjust the motion of a light microscope stage through a software program. Other papers discuss computer methods in nuclei cartography and a computer-assisted quantitative receptor autoradiography in studying receptor density distribution. Section II deals with data analysis and some computer programs for kinetic modeling of gene expression in neurons. The book also discusses a computerized analysis of opioid receptor heterogeneity by ligand binding in test animals using computerized programs instead of employing manual or graphical methods. Computerized curve fitting allows the researcher to utilize a more precise mathematical model to describe the binding of one ligand to one class of sites. Section III evaluates data modeling and simulations and describes the practicality of using computers to design model ion channels. Another paper discusses a graphical interaction program called MEMPOT to simulate an electrophysiological investigation of the properties of the membrane potential in stimulated cells. The book also presents a

quantitative data gathered from computer simulation of the factors that affect neuronal density per measured sections The book is suitable for microbiologists biochemists neuroscientists and researchers in the field of medical research as well as for advanced computer programmers in medical research work

Computers and Modern Language Studies Keith Cameron, W. S. Dodd, S. P. Q. Rahtz, 1986 *Qualitative Computing: Using Software for Qualitative Data Analysis* Mike Fisher, 2017-07-05 This book complements the existing literature by giving a detailed account of the use of four major programs in analysing the same data Priority is given to the tasks of qualitative analysis rather than to program capability and the programs are treated as tools rather than as a discipline to be acquired The key is not what the programs allow researchers to do but whether the tasks that researchers need to undertake are facilitated by the software Thus the study develops a user centred approach to the adoption of computer assisted qualitative data analysis *Abstract Interpretation of Declarative Languages* Samson Abramsky, Chris Hankin, 1987 **American Book Publishing Record**, 1982
