Computing With Words:

Computing with Words Lotfi A. Zadeh, 2012-07-11 In essence Computing with Words CWW is a system of computation in which the objects of computation are predominantly words phrases and propositions drawn from a natural language CWW is based on fuzzy logic In science there is a deep seated tradition of according much more respect to numbers than to words In a fundamental way CWW is a challenge to this tradition What is not widely recognized is that today words are used in place of numbers in a wide variety of applications ranging from digital cameras and household appliances to fraud detection systems biomedical instrumentation and subway trains CWW offers a unique capability the capability to precisiate natural language Unprecisiated raw natural language cannot be computed with A key concept which underlies preciation of meaning is that of the meaning postulate A proposition p is a restriction on the values which a variable X a variable which is implicit in p is allowed to take CWW has an important ramification for mathematics Addition of the formalism of CWW to mathematics empowers mathematics to construct mathematical solutions of computational problems which are stated in a natural language Traditional mathematics does not have this capability

Computing with Words in Information/Intelligent Systems 1 Lotfi A. Zadeh, 2013-03-09 These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words In philosophy the twentieth century is said to be the century of language This is mainly due to Wittgenstein who said The meaning of a word is its use in the language game The concept game is a concept with blurred edges In the first phrase the language game implies the everyday human activity with language and in the latter game simply implies an ordinary word Thus Wittgenstein precisely stated that a word is fuzzy in real life Unfortunately this idea about a word was not accepted in the conventional science We had to wait for Zadeh s fuzzy sets theory Remembering Wittgenstein s statement we should consider on the one hand the concept of computing with words from a philosophical point of view It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature

Computing with Words Paul P. Wang, 2001 Fuzzy logic refers to a computer s ability to make decisions involving grey or fuzzy areas As linguistics contains numerous grey areas computing with words through the use of fuzzy logic is an extremely hot topic in database and Internet research This book explores the state of the art in linguistic computation discussing how current research findings are extending the application of fuzzy logic beyond control engineering and intelligent systems into the use of language on a computer Fuzzy logic pioneer Dr Lotfi Zadeh provides the introduction for this thought provoking work

Linguistic Approximation for Computing with Words Yousef Althobaiti, 2012 Computing with words or CW is a method of using words derived from a natural language 1 rather than numbers for computing and reasoning CW simulates the way in which humans express and use their knowledge since its processing is close to that of a natural language using a mathematical model to produce meanings for inexact words and phrases Computing with words has been used in numerous applications such as decision analysis In a CW Inference

Engine since the inputs are linguistic words the outputs should be linguistic expressions so as to make more sense to humans

2 In this thesis the author has adjusted and implemented the method introduced in 3 for generating linguistic expressions for fuzzy output sets produced by CW inference The process for finding linguistic labels is called linguistic approximation LA Linguistic approximation plays an essential role in finding the best output fuzzy label It provides a solution for the problem of finding the meaning of a given fuzzy set In general it is required to map a given fuzzy value which is an output of some fuzzy computation to a set of predefined terms defined on the same universe of discourse 9 The result of a linguistic approximation algorithm will be linguistic expressions atomic terms and linguistic modifiers 3 The algorithm works by dividing the membership function into segments and then finding the most appropriate linguistic expressions corresponding to the meaning of the fuzzy set

Computing with Words in Information/Intelligent Systems: Applications, 1999 *Computing with Words in Information/Intelligent Systems 2* Lotfi Asker Zadeh, 1999-07-16 The volume is the first one in the world literature which is a comprehensive up to date account on computing with words a new direction in broadly perceived intelligent systems proposed and advocated by Professor Zadeh the founder of fuzzy sets theory and fuzzy logic Computing with words may form a basis of a computational theory of perception inspired by a remarkable human ability to perform a wide variety of tasks on the basis of vague and imprecise information expressed in natural language In Part 2 applications in a wide array of fields are presented which use the paradigm of computing with words exemplified by reasoning data analysis data mining machine learning risk analyses reliability and quality control decision making optimization and control databases medical diagnosis business analyses traffic management power system planning military applications etc

1001 Computer Words You Need to Know Jerry Pournelle, 2004 Defines the essential vocabulary of computers and the Internet with more than one thousand entries each with a sample sentence and supplementary notes that cover everything from operating systems and software applications

The 2-tuple Linguistic Model Luis Martínez, Rosa M. Rodríguez, Francisco Herrera, 2015-12-09 This book examines one of the more common and wide spread methodologies to deal with uncertainty in real world decision making problems the computing with

words paradigm and the fuzzy linguistic approach The 2 tuple linguistic model is the most popular methodology for computing with words CWW because it improves the accuracy of the linguistic computations and keeps the interpretability of the results The authors provide a thorough review of the specialized literature in CWW and highlight the rapid growth and applicability of the 2 tuple linguistic model They explore the foundations and methodologies for CWW in complex frameworks and extensions The book introduces the software FLINTSTONES that provides tools for solving linguistic decision problems based on the 2 tuple linguistic model Professionals and researchers working in the field of classification or fuzzy sets and systems will find The 2 tuple Linguistic Model Computing with Words in Decision Making a valuable resource Undergraduate and postdoctoral students studying computer science and statistics will also find this book a useful study guide

Ontological Development For Computing With Words Based Systems Mehdi Rohaninezhad, 2012 Computing with words CW is a new paradigm in soft computing proposed by Prof Zadeh in 1999 This paradigm offered an approach to precise natural language NL propositions and more importantly doing computation and reasoning based on those precised information Ontological methodology is placed in position of centrality in this paradigm for two reasons Firstly it can help us to translate NL propositions to canonical form of CW $X \text{ is } R$ which is an essential obstacle in applying this theory And more importantly it can be perceived as an extension of semantic web towards fuzzy semantics web Hence this work is an effort in the juncture of semantic web and CW theory **Dictionary of Computing** S.
