Defensive Information Warfare:

Defensive Information Warfare David S. Alberts, 1996 Information warfare has become virtually synonymous with the revolution in information technologies its potential to transform military strategies capabilities This report reviews the threat of information warfare through attacks on decision makers the information based processes they rely on their means of communicating their decisions Examines the potential for conflicts in the interaction arenas of the military economic social political ideological with a focus on defending against the possibility of attacks on the information infrastructure including what has become known as hacker warfare in its more serious form digital warfare *Sun Tzu and Information Warfare* Robert E. Neilson, 1997 [Strategic Warfare in Cyberspace](#) Gregory J. Rattray, 2001 A comprehensive analysis of strategic information warfare waged via digital means as a distinct concern for the United States and its allies In the information age information systems may serve as both weapons and targets Although the media has paid a good deal of attention to information warfare most treatments so far are overly broad and without analytical foundations In this book Gregory Rattray offers a comprehensive analysis of strategic information warfare waged via digital means as a distinct concern for the United States and its allies Rattray begins by analyzing salient features of information infrastructures and distinguishing strategic information warfare from other types of information based competition such as financial crime and economic espionage He then establishes a conceptual framework for the successful conduct of strategic warfare in general and of strategic information warfare in particular Taking a historical perspective he examines U S efforts to develop air bombardment capabilities in the period between World Wars I and II and compares them to U S efforts in the 1990s to develop the capability to conduct strategic information warfare He concludes with recommendations for strengthening U S strategic information warfare defenses *Information Warfare*, 1996 **Rethinking Defensive Information Warfare**, 2004 Although the origins of information warfare lie in the defense of critical computer systems defensive information warfare DIW per se has advanced little beyond an information assurance model Information assurance is an integral part of any military organization s operations but it falls far short of meeting the needs for robust defense of critical command and control C2 computer networks against a sophisticated adversary By looking at the ways that militaries have responded to challenging defensive situations in the past some insights can be made into the nature of IW and potential application of conventional operations This paper examines defensive tactics and strategies from the German defense in depth that emerged from World War I to the American Active Defense that developed in the Cold War and proposes a new mindset for DIW that draws on these operational concepts from military history *Trusted Recovery and Defensive Information Warfare* Peng Liu, Sushil Jajodia, 2013-03-14 Information security concerns the confidentiality integrity and availability of information processed by a computer system With an emphasis on prevention traditional information security research has focused little on the ability to survive successful attacks which can seriously impair the integrity and availability of a system Trusted

Recovery And Defensive Information Warfare uses database trusted recovery as an example to illustrate the principles of trusted recovery in defensive information warfare Traditional database recovery mechanisms do not address trusted recovery except for complete rollbacks which undo the work of benign transactions as well as malicious ones and compensating transactions whose utility depends on application semantics Database trusted recovery faces a set of unique challenges In particular trusted database recovery is complicated mainly by a the presence of benign transactions that depend directly or indirectly on malicious transactions and b the requirement by many mission critical database applications that trusted recovery should be done on the fly without blocking the execution of new user transactions Trusted Recovery And Defensive Information Warfare proposes a new model and a set of innovative algorithms for database trusted recovery Both read write dependency based and semantics based trusted recovery algorithms are proposed Both static and dynamic database trusted recovery algorithms are proposed These algorithms can typically save a lot of work by innocent users and can satisfy a variety of attack recovery requirements of real world database applications Trusted Recovery And Defensive Information Warfare is suitable as a secondary text for a graduate level course in computer science and as a reference for researchers and practitioners in information security

Report of the Defense Science Board Task Force on Information Warfare - Defense (Iw - D) Department of Defense, 2012-10 The Defense Science Board Task Force on Information Warfare Defense was established at the direction of the Under Secretary of Defense for Acquisition and Technology The Task Force was directed to focus on protection of information interests of national importance through the establishment and maintenance of a credible information warfare defensive capability in several areas including deterrence Specifically the Task Force was asked to Identify the information users of national interest who can be attacked through the shared elements of the national information infrastructure Determine the scope of national information interests to be defended by information warfare defense and deterrence capabilities Characterize the procedures processes and mechanisms required to defend against various classes of threats to the national information infrastructure and the information users of national interest Identify the indications and warning tactical warning and attack assessment procedures processes and mechanisms needed to anticipate detect and characterize attacks on the national information infrastructure and or attacks on the information users of national interest Identify the reasonable roles of government and the private sector alone and in concert in creating managing and operating a national information warfare defense capability Provide specific guidelines for implementation of the Task Force s recommendations Information infrastructures are vulnerable to attack While this in itself poses a national security threat the linkage between information systems and traditional critical infrastructures has increased the scope and potential of the information warfare threat For economic reasons increasing deregulation and competition create an increased reliance on information systems to operate maintain and monitor critical infrastructures This in turn creates a tunnel of vulnerability previously unrealized in the history of conflict Information warfare offers a veil of anonymity to potential attackers Attackers

can hide in the mesh of inter netted systems and often use previously conquered systems to launch their attacks Information warfare is also relatively cheap to wage offering a high return on investment for resource poor adversaries The technology required to mount attacks is relatively simple and ubiquitous During information warfare demand for information will dramatically increase while the capacity of the information infrastructure will most certainly decrease The law particularly international law is currently ambiguous regarding criminality in and acts of war on information infrastructures This ambiguity coupled with a lack of clearly designated responsibilities for electronic defense hinders the development of remedies and limits response options The current Administration s national security strategy for the United States suggests that the nation s economic and security interests are increasingly inseparable and that we simply cannot be successful in advancing our interests political military and economic without active engagement in world affairs In the broad sense then the scope of national information interests to be defended by information warfare defense and deterrence capabilities are those political military and economic interests These include the continuity of a democratic form of government and a free market economy the ability to conduct effective diplomacy a favorable balance of trade and a military force that is ready to fight and that can be deployed where needed Some of these activities are critical to the nation s political military and economic interests These critical functional activities in turn depend on information technology and critical infrastructures such as banking and finance electric power telecommunications and transportation

Information Warfare and Deterrence Gary F. Wheatley, Richard E. Hayes, 1996 On one level Information Warfare IW and deterrence are well matched but on other levels the two topics can be seen as orders of magnitude apart IW covers a huge domain while deterrence is a narrow topic Their relationship is spotty highly relevant on some topics marginally so on others and not at all relevant in many areas The term information warfare typically focuses on the military or cyber war domains dominated by computers This narrow definition is inconsistent with the broad policy questions relevant to IW its impact from cooperation to competition and conflict and the key role of information media Deterrence is part of IW only when the attacker is known or can be discovered the defender has a credible capability to threaten important interests of the attacker and the attacker cannot defend those interests

Defensive Information Warfare in Today's Joint Operations Bruce W. Ashman, 1997 Information warfare IW is an emerging concept that affects the use of automated systems and reflects the growing realization that information technology can be used to gain an advantage over other users Since the Gulf War the incidents of information systems attacks have increased especially in the civilian environment Attacks against military systems have gone as far as penetrating sensitive previously secure systems As this threat against information or computer based systems becomes more blatant it raises the question of how vulnerable to attack are our automated military systems Emerging technologies promise greater speed accuracy and reliability for military operations while simultaneously producing greater lethality and situation awareness However as the Armed Forces depend more and more on these systems to perform routine

and specialized operations the risk of penetration disruption or even compromise becomes apparent While information warfare has great potential as a valid offensive tool this paper explores the threat to unified and joint military operations from a defensive information warfare perspective We must first identify what the threat entails and design defensive procedures because this is where the greatest vulnerabilities lie Research and development of IW as an offensive weapon can be pursued and funded along with other conventional weapons programs What is critical is identifying weaknesses and correcting them before we become victims of information warfare itself Abstract

Defensive Information Warfare James R. Francisco,2005 Information warfare is a threat not only to military formations but to the civilian population as well Private organizations need to understand the context in which information warfare happens and be able to defend against attacks when they occur This article reviews the current literature about defensive information warfare and suggests some avenues for ongoing research Information Warfare William Hutchinson,Matthew Warren,2012-05-04 This text introduces the concepts of information warfare from a non military organizational perspective It is designed to stimulate managers to develop policies strategies and tactics for the aggressive use and defence of their data and knowledge base The book covers the full gambit of information warfare subjects from the direct attack on computer systems to the more subtle psychological technique of perception management It provides the framework needed to build management strategies in this area The topics covered include the basics of information warfare corporate intelligence systems the use of deception security of systems modes of attack a methodology to develop defensive measures plus specific issues associated with information warfare This book will be of interest to executives and managers in any public or private organization Specifically managers or staff in the areas of information technology security knowledge management public relations or marketing should find it directly useful Its main purpose is to make readers aware of the new world of information saturation thus decreasing the chance that they will become victims of those abusing the information age whilst at the same time increasing their chances of benefiting from the new opportunities produced **Strategic Information Warfare** Ronald J. Strategic Information Warfare Gregory J. Rattray, Air Force Institute of Technology

(U.S.), 1998-05-01 This work examines the potential for strategic information warfare and the challenges posed for the United States Strategic information warfare consists of attacks against and the defense of information infrastructures for achieving political objectives My analysis includes consideration of both state and non state actors The work focuses on the use of digital means and the cyberspace operating environment for the conduct of such warfare The first half develops a theoretical basis for addressing strategic information warfare The work outlines frameworks for the analysis of strategic warfare based on past theories and historical experience Relying on literature dealing with technology how it is acquired assimilated and diffused it also creates a framework of factors which facilitate the establishment of organizational technological capability These frameworks are then applied to the potential offensive and defensive challenges posed by strategic information warfare to identify key areas of concern and uncertainty The second half undertakes two case studies comparing the development of strategic warfare capabilities The case studies empirically illustrate the utility of the frameworks across different time periods and types of technologies The development of air bombardment capabilities by the U S and their employment in World War II illustrates the difficulty of creating a new form of strategic warfare The analysis then details the nascent U S effort to develop doctrine organizations and technological capability to conduct strategic information warfare in the 1990s focusing on the defensive aspects of the task Both case studies rely on primary source material archival materials and accounts of key individuals in the case of strategic bombing and U S military doctrinal publications **Right to**

National Self-Defense Dimitrios Delibasis, 2007-11-19 This ambitious work which took the better part of a decade to produce will be essential reading for all serious defence study students and of absorbing interest to military professionals and lay people concerned with the future of warfare and all aspects of response to military attack Its ultimate aim is to demonstrate that the advent of Cyberwarfare has pushed traditional legal thinking regarding the regulation of forcible action beyond traditional boundaries It attempts to do so by critically analyzing specific characteristics which are inherent to Cyberwarfare such as stealth speed untraceability the availability to State as well as Non State sponsored agents their defiance of traditional borders and an unprecedented potential for destruction all of which have played a major role in making obsolescent traditional legal norms relied upon for the effective regulation of the use of force It follows from the

above that no defence system can be effectively regulated especially one as new and unconventional as Information Warfare unless all its specific aspects are explored as deeply as possible The best means to achieve such a purpose have been deemed to be through the inclusion as well as the careful analysis of as many real life examples of Information Warfare operations as possible in order to illustrate the special nature of Information Warfare and its various individual features The examples compiled for inclusion have been selected not on the basis of being the most recent but on the basis of their factual background being as fully known as possible Consequently this book has been constructed around the concept of legality starting with a section outlining currently existing legal norms of individual self defense then applying those norms to Information Warfare Operations including a presentation of existing international legal instruments with provisions applicable to Information Warfare which could serve as additional essential guidelines for a future legal framework specifically crafted to regulate the use of force in cyberspace Last but not least this book sets a paradigm with regard to Cyberwarfare as well as with other methods of warfare which escape the boundaries of the traditional State monopoly of the use of force It ultimately shows the extent to which traditional legal thinking which is shaped around the premise of regulating typical forms of State forcible action when faced with such methods of warfare is totally obsolete
