## **Deformation Quantization For Actions Of Rd:**

Deformation Quantization for Actions of  $R^d$  Marc Aristide Rieffel, 1993 This work describes a general construction of a deformation quantization for any Poisson bracket on a manifold which comes from an action of  $R^d$  on that manifold These deformation quantizations are strict in the sense that the deformed product of any two functions is again a function and that there are corresponding involutions and operator norms Many of the techniques involved are adapted from the theory of pseudo differential operators The construction is shown to have many favorable properties A number of specific examples are described ranging from basic ones such as quantum disks quantum tori and quantum spheres to aspects of quantum groups

**Operator Algebras and Operator Theory** Liming Ge, 1998 This volume contains the proceedings from the International Conference on Operator Algebras and Operator Theory held at the East China Normal University in Shanghai China Participants in the conference ranged from graduate students to postdocs to leading experts who came from around the world Topics covered were  $C^*$  algebras von Neumann algebras non self adjoint operator algebras wavelets operator spaces and other related areas This work consists of contributions from invited speakers and some mathematicians who were unable to attend It presents important mathematical ideas while maintaining the uniqueness and excitement of this very successful event

Sixteenth International Congress on Mathematical Physics Pavel Exner, 2010 The International Congress on Mathematical Physics is the flagship conference in this exciting field Convening every three years it gives a survey on the progress achieved in all branches of mathematical physics It also provides a superb platform to discuss challenges and new ideas The present volume collects material from the XVIth ICMP which was held in Prague August 2009 and features most of the plenary lectures and invited lectures in topical sessions as well as information on other parts of the congress program This volume provides a broad coverage of the field of mathematical physics from dominantly mathematical subjects to particle physics condensed matter and application of mathematical physics methods in various areas such as astrophysics and ecology amongst others

**Mathematical Topics Between Classical and Quantum Mechanics** Nicholas P. Landsman, 2012-12-06 Subject Matter The original title of this book was Tractatus Classico Quantummechanicus but it was pointed out to the author that this was rather grandiloquent In any case the book discusses certain topics in the interface between classical and quantum mechanics Mathematically one

looks for similarities between Poisson algebras and symplectic geometry on the classical side and operator algebras and Hilbert spaces on the quantum side Physically one tries to understand how a given quantum system is related to its alleged classical counterpart the classical limit and vice versa quantization This monograph draws on two traditions The algebraic formulation of quantum mechanics and quantum field theory and the geometric theory of classical mechanics Since the former includes the geometry of state spaces and even at the operator algebraic level more and more submerges itself into noncommutative geometry while the latter is formally part of the theory of Poisson algebras one should take the words algebraic and geometric with a grain of salt There are three central themes The first is the relation between constructions involving observables on one side and pure states on the other Thus the reader will find a unified treatment of certain aspects of the theory of Poisson algebras operator algebras and their state spaces which is based on this relationship

*Poisson Geometry in Mathematics and Physics* Giuseppe Dito, 2008 This volume is a collection of articles by speakers at the Poisson 2006 conference The program for Poisson 2006 was an overlap of topics that included deformation quantization generalized complex structures differentiable stacks normal forms and group valued moment maps and reduction

**$C^*$ -Algebras: 1943-1993**, 1994 *Superstrings, Geometry, Topology, and  $C^*$ -algebras* Robert S. Doran, Greg Friedman, Jonathan Rosenberg, 2010-10-13 This volume contains the proceedings of an NSF CBMS Conference held at Texas Christian University in Fort Worth Texas May 18-22 2009 The papers written especially for this volume by well known mathematicians and mathematical physicists are an outgrowth of the talks presented at the conference Topics examined are highly interdisciplinary and include among many other things recent results on D brane charges in K homology and twisted K homology Yang Mills gauge theory and connections with non commutative geometry Landau Ginzburg models C algebraic non commutative geometry and ties to quantum physics and topology the rational homotopy type of the group of unitary elements in an Azumaya algebra and functoriality properties in the theory of C crossed products and fixed point algebras for proper actions An introduction written by Jonathan Rosenberg provides an instructive overview describing common themes and how the various papers in the volume are interrelated and fit together The rich diversity of papers appearing in the volume demonstrates the current interplay between superstring theory geometry topology and non commutative geometry The book will be of interest to graduate students mathematicians mathematical physicists and researchers working in these areas

Deformation Quantization for Actions of Kahlerian Lie Groups Pierre Bieliavsky, Victor Gayral, 2015-06-26 Let  $B$  be a Lie group admitting a left invariant negatively curved Kahlerian structure Consider a strongly continuous action of  $B$  on a Frchet algebra Denote by the associated Frchet algebra of smooth vectors for this action In the Abelian case BR and isometric Marc Rieffel proved that Weyl's operator symbol composition formula the so called Moyal product yields a deformation through Frchet algebra structures  $R$  on When  $R$  is a algebra every deformed Frchet algebra admits a compatible pre structure hence yielding a deformation theory at the level of algebras too In this memoir the authors prove both analogous statements

for general negatively curved Kählerian groups The construction relies on the one hand on combining a non Abelian version of oscillatory integral on tempered Lie groups with geometrical objects coming from invariant WKB quantization of solvable symplectic symmetric spaces and on the second hand in establishing a non Abelian version of the Calderón-Vaillancourt Theorem In particular the authors give an oscillating kernel formula for WKB star products on symplectic symmetric spaces that fiber over an exponential Lie group

**Operator Algebras and Quantum Field Theory** Sergio Doplicher,1997 A collection of papers presented at a conference in Rome on operator algebras and quantum field theory Invited contributions on noncommutative dynamical systems the Baum-Connes and the Novikov conjecture the Atiyah-Singer index theorem and Banach Space aspects are included

*Representation Theory of Groups and Algebras* Jeffrey Adams,1993 Touching on virtually every important topic in modern representation theory this book contains proceedings of the activities of the Representation Theory Group at the University of Maryland at College Park during the years 1989-1992 Covered here are the latest results in the field providing a readable introduction to the work of some of the best young researchers in representation theory The book spans a very broad spectrum for example within real representation theory both semisimple and nonsemisimple analysis are discussed within  $C^*$ -algebras both geometric and nongeometric approaches are studied In addition the articles are exceptionally well written and range from research papers aimed at specialists to expository articles accessible to graduate students

*String-Math 2013* Ron Donagi, Michael R. Douglas, Ljudmila Kamenova, Martin Roček,2014-12-02 This volume contains the proceedings of the conference String Math 2013 which was held June 17-21, 2013 at the Simons Center for Geometry and Physics at Stony Brook University This was the third in a series of annual meetings devoted to the interface of mathematics and string theory Topics include the latest developments in supersymmetric and topological field theory localization techniques the mathematics of quantum field theory superstring compactification and duality scattering amplitudes and their relation to Hodge theory mirror symmetry and two-dimensional conformal field theory and many more This book will be important reading for researchers and students in the area and for all mathematicians and string theorists who want to update themselves on developments in the math-string interface
