When a net force acts on an object, the object's motion will change. This means that the object's speed or direction will change. However, if the net force is zero, the object's motion will not change. This means that the object's speed and direction will stay the same. This is called Newton's first law of motion.</p> <p>Another way that forces can cause an object to change its motion is by changing its acceleration. Acceleration is the rate at which an object's velocity changes. If an object is accelerating, its velocity is changing. This means that the object's speed or direction is changing. This is called Newton's second law of motion.</p> <p>Forces can also cause an object to change its motion by changing its position. This means that the object is moving from one place to another. This is called Newton's third law of motion.</p> </div> <p>Answer the questions that follow.</p> <ol style="list-style-type: none"> <li>What does Newton's first law of motion state?             <ol style="list-style-type: none"> <li>An object at rest stays at rest.</li> <li>An object in motion stays in motion with the same speed and in the same direction unless acted upon by an unbalanced force.</li> <li>An object's motion will change if a net force acts on it.</li> <li>An object's motion will change if a net force does not act on it.</li> </ol> </li> <li>What does Newton's second law of motion state?             <ol style="list-style-type: none"> <li>The acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass.</li> <li>The acceleration of an object is directly proportional to its mass and inversely proportional to the net force acting on it.</li> <li>The acceleration of an object is directly proportional to the net force acting on it and directly proportional to its mass.</li> <li>The acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass.</li> </ol> </li> <li>What does Newton's third law of motion state?             <ol style="list-style-type: none"> <li>For every action, there is an equal and opposite reaction.</li> <li>For every action, there is an equal and opposite reaction that acts on the same object.</li> <li>For every action, there is an equal and opposite reaction that acts on a different object.</li> <li>For every action, there is an equal and opposite reaction that acts on the same object in the same direction.</li> </ol> </li> <li>What does Newton's third law of motion state?             <ol style="list-style-type: none"> <li>For every action, there is an equal and opposite reaction.</li> <li>For every action, there is an equal and opposite reaction that acts on the same object.</li> <li>For every action, there is an equal and opposite reaction that acts on a different object.</li> <li>For every action, there is an equal and opposite reaction that acts on the same object in the same direction.</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
