**Defence Industries in the 21st Century** Çağlar Kurç, Richard A. Bitzinger, Stephanie G. Neuman, 2021-05-13 *Defence Industries in the 21st Century* explores the transformation in the global defence industrial production through examining the interaction between international and domestic factors With the global defence industry and arms market likely continue to expand and mature the ways in which this progression could influence international politics remain obscure In practice as the contents of this book show the defence industrial bases and arms export policies of emerging states display significant variance This variance is the result of a unique balance between domestic and international factors that has shaped the defence industrialisation behaviour and policies of the less industrialised states One of the most important conclusions of the book is that the interplay between domestic and international factors clearly influences the variation in the emerging states defence industrialisation policies as well as their success or failure While international factors create opportunities they also limit the options available to emerging economies Domestic factors also play an important role by shaping the policy choices of the states decision makers Exploring the balance between international and domestic factors and the ways in which they influence defence industrialisation in emerging states *Defence Industries in the 21st Century* will be of great interest to scholars of Defence Industries Arms Manufacturing and Defence Strategic and Security Studies more generally The chapters were originally published in *Defence Studies Comparative Strategy and All Azimuth Democracy's Arsenal* Jacques S. Gansler, 2013-08-16 An expert explains why the security needs of the twenty first century require a transformation of the defense industry of the twentieth century New geopolitical realities including terrorism pandemics rogue nuclear states resource conflicts insurgencies mass migration economic collapse and cyber attacks have created a dramatically different national security environment for America Twentieth century defense strategies technologies and industrial practices will not meet the security requirements of a post 9 11 world In *Democracy s Arsenal* Jacques Gansler describes the transformations needed in government and industry to achieve a new more effective system of national defense Drawing on his decades of experience in industry government and academia Gansler argues that the old model of ever increasing defense expenditures on largely outmoded weapons systems must be replaced by a strategy that combines a healthy economy effective international relations and a strong but affordable national security posture The defense industry must remake itself to become responsive and relevant to the needs of twenty first century security      **Evolution of the U.S. Defense Industry** Michael D. Rich, 1990      **Air University Library Index to Military Periodicals** ,1989      **Military transformation and the defense industry after next the defense industrial implications of network-centric warfare** , *Military Innovation in Türkiye* Barış Ateş, 2023-01-31 This book explores Turkish military innovation since the Cold War The major questions addressed are how Türkiye has been able to innovate the production of new weapon systems its philosophical background how the country overcame bureaucratic and economic obstacles and how these innovations resonated in military

**Defense Sector** United States. General Accounting Office,1995 *Defense industry trends in DOD spending, industrial productivity, and competition : report to congressional requesters.* , **Buying Military Transformation** Peter Dombrowski,Eugene Gholtz,2006-09-26 In *Buying Military Transformation* Peter Dombrowski and Eugene Gholtz analyze the United States military's ongoing effort to capitalize on information technology New ideas about military doctrine derived from comparisons to Internet Age business practices can be implemented only if the military buys technologically innovative weapons systems *Buying Military Transformation* examines how political and military leaders work with the defense industry to develop the small ships unmanned aerial vehicles advanced communications equipment and systems of systems integration that will enable the new military format Dombrowski and Gholtz's analysis integrates the political relationship between the defense industry and Congress the bureaucratic relationship between the firms and the military services and the technical capabilities of different types of businesses Many government officials and analysts believe that only entrepreneurial start up firms or leaders in commercial information technology markets can produce the new network oriented military equipment But Dombrowski and Gholtz find that the existing defense industry will be best able to lead military technology development even for equipment modeled on the civilian Internet The U S government is already spending billions of dollars each year on its military transformation program money that could be easily misdirected and wasted if policymakers spend it on the wrong projects or work with the wrong firms In addition to this practical implication *Buying Military Transformation* offers key lessons for the theory of Revolutions in Military Affairs A series of military analysts have argued that major social and economic changes like the shift from the Agricultural Age to the Industrial Age inherently force related changes in the military *Buying Military Transformation* undermines this technologically determinist claim commercial innovation does not directly determine military innovation instead political leadership and military organizations choose the trajectory of defense investment Militaries should invest in new technology in response to strategic threats and military leaders professional judgments about the equipment needed to improve military effectiveness Commercial technological progress by itself does not generate an imperative for military transformation Clear cogent and engaging *Buying Military Transformation* is essential reading for journalists legislators policymakers and scholars **Federal Register** ,1941 **From Swords To Plowshares?** Paul Humes Folta,2019-03-07 It is with great pleasure that I recognize

Arms and Innovation James Hasik, 2013-04-01 With many of the most important new military systems of the past decade produced by small firms that won competitive government contracts defense industry consultant James Hasik argues in Arms and Innovation that small firms have a number of advantages relative to their bigger competitors Such firms are marked by an entrepreneurial spirit and fewer bureaucratic obstacles and thus can both be more responsive to changes in the environment and more strategic in their planning This is demonstrated Hasik shows by such innovation in military technologies as those that protect troops from roadside bombs in Iraq and the Predator drones that fly over active war zones and that are crucial to our new war on terror For all their advantages small firms also face significant challenges in access to capital and customers To overcome such problems they can form alliances either with each other or with larger companies Hasik traces the trade offs of such alliances and provides crucial insight into their promises and pitfalls This ground breaking study is a significant contribution to understanding both entrepreneurship and alliances two crucial factors in business generally It will be of interest to readers in the defense sector as well as the wider business community

The Economics of Defense Industry Thomas-Durell Young, 2023-10-17 This book on the economics of defence industry assesses a series of historical and contemporary case studies that consistently demonstrate the need for governments to recognise and thereafter factor the financial needs of a narrow industrial sector that is capital intensive technologically advanced and that requires a highly skilled labour force

Since the end of the cold war Western governments have systematically reduced financial support to their domestic defence industry and have seemingly ignored planning and funding industrial mobilisation In all cases government policy has been to encourage industries to consolidate capacity to become financially viable in a sector that has seen diminished demand The 2022 Russian invasion of Ukraine has caused Western governments to reassess their previous assumptions Efforts to increase industrial capacity have been met with the iron laws of economics whereby businesses need to show return on investments The chapters in this volume posit that efforts to rationalise industrial capacity and innovation to meet short term financial efficiencies inevitably results in limited expensive and long delays in increased production in times of international crisis This book serves as an essential guide for academics researchers and students interested in defence economics industrial economics international relations and industrial policy The chapters in this book were originally published in various issues of Defense Security Analysis **Defense Industry Diversification** John S.
