Ecological Economic Analysis for Regional Development Walter Isard, Harvard University. Department of Landscape Architecture. Research Office, 1971 **Ecological-economic Analysis for Regional Development**, 1972

Ecological-economic Analysis for Regional Development Walter Isard, Harvard University. Department of Landscape Architecture. Research Office, 1972 Ecological case study and cost benefit analysis of economic resources and natural resources in the new england region of the USA undertaken for the purpose of developing an adequate methodology for the evaluation of various regional planning alternatives relating to the development of coastal areas and of the environment in general attempts also to illustrate the intricate relationship between the economy and the ecosystem and between economic development and environmental management and includes models Maps references and statistical tables

Ecologic-economic Analysis for Regional Development Walter Isard, 1968 **Ecologic-economic analysis for regional development** Walter Isard, Charles L. Choguill, 1972 Spatial Ecological-Economic Analysis for Wetland Management Jeroen C. J. M. Bergh, Aat Barendregt, Alison J. Gilbert, 2004-06-10 Wetlands are very sensitive and valuable ecosystems that are subject to much stress from human activities The study presented here has developed an innovative triple layer framework for analysis of wetland management This approach provides support for spatial matching between physical planning hydrological and ecological processes and economic activities The authors describe how integrated modelling at the regional scale can be achieved in practice Following an introduction to wetlands theoretical aspects of the contributing disciplines are discussed as well as various aspects of integrated and spatial modelling An applied integrated assessment of spatial wetland management for the Vecht area between Amsterdam and Utrecht is then presented This assessment has resulted in a set of linked hydrological ecological and economic models formulated at the level of grids and polders and various types of evaluations and rankings of scenarios The results indicate the value of maintaining spatial detail for as long as possible **Ecologic-economic Analysis for Regional Development** Walter Isard, 1972 **Ecologic-economic Analysis for Regional Development; Some Initial Explorations with Particular Reference to Recreational Resource Use and Environmental Planning [By] Walter Isard [and Others].** , *Regional Industrial Analysis and Development* Geoffrey J. D. Hewings, 2017-09-05 Originally published in 1977 This book provides an introduction to some of the more important techniques of regional analysis techniques derived from geographical regional economic and regional science theory and describes the way some of these techniques have been applied in the identification of problems development of strategy and evaluation of regional programmes The theory and applications of methods of regional analysis are integrated with the use of examples taken from the USA the UK and Canada The author introduces the problems which are encountered in the field of regional analysis describes some of the analytical tools beginning with the fundamental model of the economic base approach and then examines regional flows and the applicability of international trade theory to interregional trade

Considering the shortcomings of the aggregated base approach input output analysis is also examined

Ecologic-economic Analysis for Regional Development, 1972 **Environmental Amenities and Regional Economic Development** Todd L. Cherry, Dan Rickman, 2009-12-04 Rising U S income and wealth in recent decades have fueled an increase in consumption demand for environmental amenities Many observers and researchers have argued that this at least in part underlies current differentials in economic growth across regions This collection of key articles addresses the issues and more **Ecological Economic and Socio Ecological Strategies for Forest Conservation** Felix Fuders, Pablo J. Donoso, 2020-05-13 This book proposes strategies for improving the resilience and conservation of temperate forests in South America such that these forests can provide ecosystem services in a sustainable way As such it contributes to the design of a resilient human forest model that takes into account the multiculturalism of local communities in many cases including aspects of ecological economics development economics and territorial development planning that are related to indigenous peoples or first nations Further it provides proposals for public and territorial policies that improve the state of conservation of native forests and forest ecosystems based on a critical analysis of the economic factors that lead to the degradation of forest ecosystems in South America today This edition was conceived by members of the Transdisciplinary Research Center for Social and Ecological Strategies for Sustainable Forest Management in South America at the Universidad Austral de Chile It includes contributions by distinguished researchers from around the world combining the fields of economics ecology biology anthropology sociology and statistics It is not however simply a collection of works written by authors from different disciplines but rather each chapter is in itself transdisciplinary This approach makes the book a unique contribution to enhancing social managerial and political approaches to forestry management helping to protect forest ecosystem services and make them more sustainable This in turn will benefit local communities and society as a whole by reducing the negative externalities of forestry management and enhancing future opportunities **Regional Economic Development** Robert J. Stimson, Roger R. Stough, Brian H. Roberts, 2013-03-09 Regional economic development has attracted the interest of economists geographers planners and regional scientists for a long time And of course it is a field that has developed a large practitioner cohort in government and business agencies from the national down to the state and local levels In planning for cities and regions both large and small economic development issues now tend to be integrated into strategic planning processes For at least the last 50 years scholars from various disciplines have theorised about the nature of regional economic development developing a range of models seeking to explain the process of regional economic development and why it is that regions vary so much in their economic structure and performance and how these aspects of a region can change dramatically over time Regional scientists in particular have developed a comprehensive tool kit of methodologies to measure and monitor regional economic characteristics such as industry sectors employment income value of production investment and the like using both quantitative and qualitative methods of analysis and focusing on both

static and dynamic analysis The father of regional science Walter Isard was the first to put together a comprehensive volume on techniques of regional analysis Isard 1960 and since then a huge literature has emerged including the many titles in the series published by Springer in which this book is published *Eco-Innovation and Green Productivity for Sustainable Production and Consumption, 2nd edition* Munir Ahmad, Cem Işık, Zeeshan Fareed, 2025-09-12

With the graduation of time the desire for enhanced production and consumption scales motivated the global economies to opt for the race to the bottom approach leading to environmental unsustainability On the one hand economies focused on escalated production levels proliferating non renewable energy consumption and reducing energy productivity leading to production based carbon dioxide CO₂ emissions On the other hand international trade of high CO₂ emissions embedded goods has skyrocketed the consumption based CO₂ emissions Since production and consumption based CO₂ emissions challenge environmental sustainability there is an urgent need to pursue sustainable production and consumption to realize the United Nations Sustainable Development Goals (SDGs) dream In this regard eco innovation came into play to transition the conventional production setup to a cleaner production mode Eco innovation involves all types of technological advancements extending contributions to the SDGs In this regard climate technologies and environmental technologies involving renewable energy e.g. wind solar biogas energy efficient technologies e.g. energy efficient electric appliances environmental pollution reduction technologies e.g. carbon scrubbing filters water purifiers waste mitigation technologies play a tremendous role in mitigating climatic adversities and environmental unsustainabilities By contributing to the responsible use of natural capital eco innovation facilitates efficient energy utilization improving energy productivity as well as environmental sustainability Moreover eco innovation has the inherent potential to aggravate sustainable production modes through green productivity a tool to enhance industrial outputs with fewer harms to the environment As a progressive move green productivity growth promotes a new trend of producing more economic output by consuming fewer resources and safeguarding ecosystems The mainstream empirical literature substantiated that eco innovation and green productivity remained critical players in limiting CO₂ emissions and promoting environmental sustainability Literature also witnessed that eco innovation ameliorated energy productivity by motivating the countries to adopt cost saving and environmentally friendly technologies On the contrary the rebound effect supported the environmental deterioration impact of such technologies Against this backdrop this Research Topic will provide an opportunity to further delve into the influencing mechanisms triggered by eco innovation and green productivity growth on energy productivity and environmental sustainability for a futuristic perspective of sustainable production and consumption This Research Topic welcomes theoretical and empirical original research articles and reviews Research themes and areas include but are not limited to the following Links between eco innovation green productivity growth and energy productivity for sustainable production Climate technologies and carbon neutrality applications for sustainable production Firm level environment related innovation practices Renewable and energy efficient industrial
