Ecodesign Pilot:

ECODESIGN Pilot Wolfgang Wimmer, Rainer Züst, 2003-01-31 Up to now environmental policies have relied mainly on rules regulations and prohibitions This kind of environmental policy a clearly reactive approach has shown a mounting array of limitations There is a clear need to seek new solutions in particular those involving the initiative of firms themselves Since the mid 1980 s a new approach called environmental management has been established in research and practical applications it is designed to systematically integrate environmental considerations into company activities If for instance environmental objectives are being formulated for an enterprise it is imperative to identify highlight and analyze real and significant environmental impacts of the firm s activities and to take appropriate measures to improve its performance Controlling and implementing these environmental objectives requires suitable structures procedures and tools Many motivated companies have approached the issue of environmental management through incorporating methods such continual improvement processes and Life Cycle Assessment into the various operational activities of the enterprise Some firms initiated such transformation processes at their own production sites because it was easier to identify their own environmental impacts than to analyze let alone mitigate the effects of upstream and downstream processes However in many cases these processes are decisive factors in the overall environmental performance of a product It has become clear that product design can influence these processes to a great extent

Establishing Av Nordic Life Cycle Association

Michael Hauschild, 2009 The project aimed to establish and develop a non profit organization the Nordic Life Cycle Association NorLCA with the goal of supporting sustainable development through the use of life cycle approaches and methodology NorLCA is a multidisciplinary platform for Life Cycle Thinking and addresses LCA specialists business managers product developers environmental managers sales and marketing managers researchers teachers NGOs authorities student and others with an interest in life cycle thinking eco design and sustainable development The main goal of NorLCA is to facilitate and support a broader and increased use of life cycle related concepts NorLCA focuses on networking activities and dissemination of information and establishing easily accessible information and knowledge exchange channels between the formal and informal life cycle networks

ECODESIGN Implementation

Wolfgang Wimmer, Rainer Züst, Kun-Mo Lee, 2004-10-20 Stakeholders such as environmental directives and customer demands for reducing environmental impacts of a product require innovative and environmentally improved products Therefore a systematic approach and effective methods and tools are needed in the early phase of product development The basic elements for optimized process management in the design department are described in this book The book provides twelve easy to follow steps for implementing ECODESIGN in a company It gives clear advice how to integrate environmental considerations into product design and development and combines ECODESIGN with Life Cycle Assessment and Environmental Communication Chapters on Product modeling Life Cycle Assessment ECODESIGN tasks Product Improvement and Environmental

Communication use the previously developed ECODESIGN PILOT www.ecodesign.at/pilot and show its application to a real product example The book comes with two web tools one is the ECODESIGN PILOT used to find measures to environmentally improve a product within a short time The other is the ECODESIGN PILOT s Assistant www.ecodesign.at/assist an expert system which helps to find the right improvement strategy for a product Audience This book will be of interest to environmental and sustainability managers engineers in research and product development to designers environmental experts and consultants as well as to students working in this field

Design for Enhancing Eco-efficiency of Energy-related Products Suphichaya Suppipat, Treechada Chotiratanapinun, Kulthida Teachavorasinskun, Allen H.

Hu, 2022-11-17 This brief textbook underpins the concept of eco efficiency in product design and systematically addresses the essence of the integration of simplified life cycle assessment LCA methods and tools into industrial design Fundamental steps of LCA based tools implementation within the higher education context are proposed using energy related products ErP design as a prime case study All chapters are designed to respond to the common frequently asked questions in LCA based tools implementation during the sustainable product design process The chapters are also enriched with discussions data sources of simplified LCA tools and examples of design assignments that provide constructive learning Some assignments aim at encouraging tool users reflections while others tackle particularly at knowledge exchange The examples can assist the reader to visualize challenges and opportunities to engage learners who are tool users This textbook broadens LCA knowledge for industrial design and environmental engineering students as well as enhance their sustainable product design performance For professional practitioners including industrial designers product engineers entrepreneurs and the like this textbook can be used as a guide at the introductory level for integrating life cycle thinking into product design and development

Ecodesign Kun-Mo Lee, 2005 **Design and Manufacture for Sustainable Development** Bernard

Hon, 2002-04-22 Design and Manufacture for Sustainable Development brings together a collection of papers from a conference held at the University of Liverpool in June 2002 that inspire the interchange of ideas on the theory technology tools and methodology for the entire product life cycle within the framework of sustainable development It also embraces key subjects including strategy design materials manufacturing packaging distribution disposal recycling and auditing TOPICS COVERED INCLUDE Philosophy of and strategy for sustainable technologies Design principles for sustainable development Sustainable manufacturing technologies Use of recycling bio degradable materials Re use and recycling design and technologies Tools for sustainable product design Measurement and auditing Best practices and case studies Impact of emerging legislation International trends and future development Sustainable development will have a fundamental impact on the engineering community since through design and manufacture we are responsible for the use of energy materials and processes for the complete product life cycle This is an essential volume for the bookshelves of those wanting to be well informed about this evolving technology
