Colour Vision Study In Cognitive Science And The Philosophy Of Perception:

Colour Vision Evan Thompson,1995 This book is a major contribution to the interdisciplinary project of investigating the true nature of color vision In recent times research into color vision has been one of the main success stories of cognitive science Each discipline in the field neuroscience psychology linguistics computer science and philosophy has contributed significantly to our understanding of color Evan Thompson provides an accessible review of current scientific and philosophical discussions of color vision He steers a course between the subjective and objective positions on color arguing for a relational account Thompson develops a novel ecological approach to color vision in cognitive science and the philosophy of perception The book is vital reading for all cognitive scientists and philosophers whose interests touch upon this central area

Colour Vision and the Comparative Argument, a Case Study in Cognitive Science and the Philosophy of Perception Evan Timothy Thompson,1990

The Routledge Handbook of Embodied Cognition Lawrence Shapiro,2014-04-29 Embodied cognition is one of the foremost areas of study and research in philosophy of mind philosophy of psychology and cognitive science The Routledge Handbook of Embodied Cognition is an outstanding guide and reference source to the key topics and debates in this exciting subject and essential reading for any student and scholar of philosophy of mind and cognitive science Comprising over thirty chapters by a team of international contributors the Handbook is divided into six parts Historical underpinnings Perspectives on embodied cognition Applied embodied cognition perception language and reasoning Applied embodied cognition social and moral cognition and emotion Applied embodied cognition memory attention and group cognition Meta topics The early chapters of the Handbook cover empirical and philosophical foundations of embodied cognition focusing on Gibsonian and phenomenological approaches Subsequent chapters cover additional important themes common to work in embodied cognition including embedded extended and enactive cognition as well as chapters on empirical research in perception language reasoning social and moral cognition emotion consciousness memory and learning and development

Consciousness and Intentionality: Models and Modalities of Attribution D. Fisette,2013-03-14 Philosophy of mind has been one of the most active fields in philosophy for the past three decades One of the most significant factors in the development of this discipline has been the emergence of cognitive science and the interest philosophers have taken in the empirical study of mind Another equally important factor has been the naturalistic turn brought about by W V Quine His proposal that normative epistemology be replaced by empirical psychology marked a radical departure from the Fregean anti psychologism and apriorism that had characterized much of the analytic tradition in philosophy But while Quine's program of naturalization called the attention of philosophers to empirical psychology his conception of psychology was inspired by an austere behaviorism which shunned the mentalism of intentional psychology in the Brentanian and phenomenological tradition Thus while agreeing with Brentano that the intentional idiom could not be reduced to that of the natural sciences Quine argued that it is of a piece with the indeterminacy of translation

Most contributors of this collection share the cognitivist stance and believe that the mind needs to be explained rather than eliminated. Three main questions are actually confronting current philosophers of mind, each addressed by one or another of the contributors to the present collection.

Color Perception Steven Davis, 2000. Color has been studied for centuries but has never been completely understood. Digital technology has recently sparked a burgeoning interdisciplinary interest in color. The fact that color is a quality of perception rather than a physical quality brings up a host of interesting questions of interest to both artists and scholars. This volume, the ninth in the Vancouver Studies in Cognitive Science series, brings together chapters by psychologists, philosophers, computer scientists, and artists to explore the nature of human color perception with the aim to further our understanding of color by encouraging interdisciplinary interaction.

Color, Healthcare and Bioethics Henk ten Have, 2025-03-28. This book explores the profound yet often overlooked role of color in healthcare and bioethics, arguing that color is far more than a visual or aesthetic element; it actively shapes human experience, perception, and ethical reasoning. Traditionally regarded as secondary to objective medical observations or rational ethical debates, color has been marginalized in these fields, considered subjective and inconsequential. However, this book reveals that color is critical in diagnostic and therapeutic practices and that it subconsciously influences moral interpretations in bioethics. Through examples like the blue hour, a time of day associated with melancholy and creativity, readers are invited to consider color not just as a physical phenomenon explained by wavelengths and visual physiology but as a medium rich with emotional and metaphorical meaning. From feeling blue to seeing the world in black and white, color conveys complex messages that inform our perceptions of health, morality, and identity. By bridging the gap between science, emotion, and ethics, this book illuminates how colors impact our worldviews, urging readers to consider the subtle yet significant ways that color influences our understanding of ourselves and the world around us.

The Red and the Real Jonathan Cohen, 2009-06-25. *The Red and the Real* offers a new approach to longstanding philosophical puzzles about what colors are and how they fit into the natural world. Jonathan Cohen argues for a role functionalist treatment of color, a view according to which colors are identical to certain functional roles involving perceptual effects on subjects. Cohen first argues on broadly empirical grounds for the more general relationalist view that colors are constituted in terms of relations between objects, perceivers, and viewing conditions. He responds to semantic, ontological, and phenomenological objections against this thesis and argues that relationalism offers the best hope of respecting both empirical results and ordinary belief about color. He then defends the more specific role functionalist account by contending that the latter is the most plausible form of color relationalism.
