Combustion Stability:

Modern Engineering for Design of Liquid-Propellant Rocket Engines Dieter K. Huzel,1992 **Scientific and Technical Aerospace Reports** ,1965 **Combustion Stability** Károly Reményi,1980 COMBUSTION INSTABILITY. DYNAMIC SCIENCE CORP MONROVIA CALIF.,1965 The principal objective of the program was to relate combustion stability to injector design variables through a consideration of droplet dynamics and combustion The basic model treats the individual droplets as energy and mass sources Stability or instability is determined by the relationship between energy and mass addition and the characteristics of the chamber or of a disturbance introduced into the chamber Depending upon such relationships a disturbance will be either amplified or damped A determination of the stability of a system will depend not only upon the frequency response of the energy and or mass source but may also depend upon its spatial relationship One of the first efforts in the study was to determine whether propellant droplets would assume specific patterns with respect to a disturbance and whether these patterns could affect the stability of the combustion process **Technical Abstract Bulletin** ,1967 *NASA Thesaurus* ,1998 Contains the authorized subject terms by which the documents in the NASA STI Database are indexed and retrieved **Combustion Instability. Analytical Survey** LIBRARY OF CONGRESS WASHINGTON D C AEROSPACE TECHNOLOGY DIV.,1965 Liquid rocket engines are subject to a wide variety of types of combustion instability The two basic instability modes are chugging a low frequency instability mode which is caused by interaction between the chamber pressure and the injection flow rate fluctuations and screaming a more harmful high frequency acoustic instability mode which may lead to burnout of the motor due to increased heat flux Only two articles on low frequency instability were found in Soviet open literature Experimental studies or analyses of high frequency instability which take into account actual engine operation i e mixing evaporation dissociation fuel atomization etc were not found in the literature surveyed However several theoretical studies were found which deal with highfrequency instability under idealized conditions The majority of the Soviet studies included in this report deal with the interaction of shock and pressure waves with the flame front These studies are of high phenomenological interest and are indirectly applicable to combustion stability analysis Author **Combustion Instability** Miron Semenovitch Natanzon,1999 First published in 1986 by Mashinostroenie Moscow Aeronautical Engineering Review ,1957 **A Simplified Computer Program for the Prediction of the Linear Stability Behavior of Liquid Propellant Combustors** C.
