Abstract: On a geometrical view, the conception of map geometries is introduced, which is a nice model of the Smarandache geometries, also new kind of and more general intrinsic geometry of surfaces. Some open problems related combinatorial maps with the Riemann geometry and Smarandache geometries are presented.

Key Words: map, Smarandache geometry, model, classification.

1. What is a combinatorial map

A graph Γ is a 2-tuple (V, E) consists of a finite non-empty set V of vertices together with a set E of unordered pairs of vertices, i.e., $E \subseteq V \times V$. Often denoted by $V(\Gamma)$, $E(\Gamma)$ the vertex set and edge set of the graph $\Gamma([9])$.

For example, the graph in the Fig.1 is the complete graph K_4 with vertex set $V = \{1, 2, 3, 4\}$ and edge set $E = \{12, 13, 14, 23, 24, 34\}$.

A map is a connected topological graph cellularly embedded in a surface. In 1973, Tutte gave an algebraic representation for an embedding of a graph on locally orientable surface ([18]), which transfer a geometrical partition of a surface to a kind of permutation in algebra as follows([7][8]).

A *combinatorial map* $M = (\mathcal{X}_{\alpha,\beta}, \mathcal{P})$ is defined to be a basic permutation $\mathcal{P}$, i.e, for any $x \in \mathcal{X}_{\alpha,\beta}$, no integer k exists such that $\mathcal{P}^k x = \alpha x$, acting on $\mathcal{X}_{\alpha,\beta}$, the disjoint union of *quadricells* Kx of $x \in \mathcal{X}$ (the base set), where $K = \{1, \alpha, \beta, \alpha\beta\}$ is the *Klein* group, satisfying the following two conditions:

(i) $\alpha\mathcal{P} = \mathcal{P}^{-1}\alpha$;

(ii) the group $\Psi_J =< \alpha, \beta, \mathcal{P} >$ is transitive on $\mathcal{X}_{\alpha,\beta}$.

For a given map $M = (\mathcal{X}_{\alpha,\beta}, \mathcal{P})$, it can be shown that $M^* = (\mathcal{X}_{\beta,\alpha}, \mathcal{P}\alpha\beta)$ is also a map, call it the *dual* of the map M. The vertices of M are defined as the pairs of conjugatcy orbits of $\mathcal{P}$ action on $\mathcal{X}_{\alpha,\beta}$ by the condition (Ci) and edges the orbits of K on $\mathcal{X}_{\alpha,\beta}$, for example, $\forall x \in \mathcal{X}_{\alpha,\beta}$, $\{x, \alpha x, \beta x, \alpha\beta x\}$ is an edge of the map M. Define the faces of M to be the vertices in the dual map M^*. Then the Euler characteristic $\chi(M)$ of the map M is

$$\chi(M) = \nu(M) - \varepsilon(M) + \phi(M)$$

where, $\nu(M), \varepsilon(M), \phi(M)$ are the number of vertices, edges and faces of the map M.

Combinatorial Patterns For Maps Of The Interval:

Combinatorial Patterns for Maps of the Interval Michał Misiurewicz,Zbigniew Nitecki,1991 This extensive paper is concerned with the implications of the existence of a given finite invariant set in a continuous map of an interval Reductions of patterns are introduced a combinatorial shadowing theorem is proved the relations between positive and negative representatives of a given cycle is elucidated and maximal patterns and permutations of a given degree are characterized

Sharkovsky,2022-09-05 This book provides a comprehensive survey of the Sharkovsky ordering its different aspects and its role in dynamical systems theory and applications It addresses the coexistence of cycles for continuous interval maps and one dimensional spaces combinatorial dynamics on the interval and multidimensional dynamical systems Also featured is a short chapter of personal remarks by O M Sharkovsky on the history of the Sharkovsky ordering the discovery of which almost 60 years ago led to the inception of combinatorial dynamics Now one of cornerstones of dynamics bifurcation theory and chaos theory the Sharkovsky ordering is an important tool for the investigation of dynamical processes in nature Assuming only a basic mathematical background the book will appeal to students researchers and anyone who is interested in the subject **Thirty Years After Sharkovskii's Theorem: New Perspectives - Proceedings Of The Conference** Luis Alseda,Jaume Llibre,Michal Misiurewicz,Francisco Balibrea,1996-01-23 These proceedings contain a collection of papers on Combinatorial Dynamics from the lectures that took place during the international symposium Thirty Years after Sharkovski s Theorem New Perspectives which was held at La Manga del Mar Menor Murcia Spain from June 13 to June 18 1994 Since Professor A N Sharkovski s landmark paper on the coexistence of periods for interval maps several lines of research have been developed opening applications of models to help understand a number of phenomena from a wide variety of fields such as biology economics physics etc The meeting served to summarize the progress made since Professor Sharkovski s discovery and to explore new directions *Dynamics of One-Dimensional Maps* A.N. Fedorenko,2013-06-29 maps whose topological entropy is equal to zero i e maps that have only cyeles of pe 2 riods 1 2 2 are studied in detail and elassified Various topological aspects of the dynamics of unimodal maps are studied in Chap ter 5 We analyze the distinctive features of the limiting behavior of trajectories of smooth maps In particular for some elasses of smooth maps we establish theorems on the number of sinks and study the problem of existence of wandering intervals In Chapter 6 for a broad elass of maps we prove that almost all points with respect to the Lebesgue measure are attracted by the same sink Our attention is mainly focused on the problem of existence of an invariant measure absolutely continuous with respect to the Lebesgue measure We also study the problem of Lyapunov stability of dynamical systems and determine the measures of repelling and attracting invariant sets

The problem of stability of separate trajectories under perturbations of maps and the problem of structural stability of dynamical systems as a whole are discussed in Chap ter 7 In Chapter 8 we study one parameter families of maps We analyze bifurcations of periodic trajectories and properties of the set of bifurcation values of the parameter in eluding universal properties such as Feigenbaum universality *Notices of the American Mathematical Society* American Mathematical Society,1992 **Nonlinearity** ,2009-10 **Transactions of the American Mathematical Society** ,1996 **Algorithms in Bioinformatics** Philipp Bücher,Bernard M.E.
